

Padi-Lock

Medical Tube Length Reducing Apparatus

The Padi-Lock was designed by a registered nurse to control the excess length in IV tubing. Medical IV lines and tubing are abundant in clinical practice and it is not uncommon to see IV lines and other cables tangled when patients are in bed, mobile or in transport.

The Padi-lock efficiently reduces
UP TO 32 INCHES
of excess IV tubing.

WHEN MULTIPLE IV LINES ARE USED;
the Padi-Lock can be connected in series
by the convenient slide locking mechanisms
on either side of the Padi-Lock.

Features of Padi-Lock

- Reduces up to 32 inches of excess length in IV tubing
- Clear "see through" design for easy monitoring
- Multiple Padi-Locks can be attached to one another for additional line monitoring and control
- Easily fits into a back pack for Home Health Patients
- Disposed of after use
- No more tangled IV lines
- Hangs Freely on I.V. Line
