Acumen To Embark on Global Seminar Tour to Inaugurate Release of Fuse Version 3.1.

AUSTIN, Texas—As the global expansion of the Acumen Fuse platform accelerates, the Acumen (www.projectacumen.com) leadership team, in conjunction with corporate partners, has announced a 16-stop global seminar series to respond to increased demand for Fuse-centric events, information and support.

The seminars will present and demonstrate the newest release of Fuse, version 3.1, scheduled to release on March 1; applications of the Fuse 360 module; and, the new-to-market tool Acumen Cloud™.

Included in Fuse 3.1, Acumen Cloud™ is a limitless, self-learning knowledge base of global project data designed to make smart comparisons and equip project teams to make the most realistic and high-quality project schedules possible. With Acumen Cloud, Fuse users will gain instant access to the intelligence within the cloud, which anonymously and securely scores and ranks schedules among other similar projects worldwide.

Additionally, Acumen Cloud performs its own analysis, based upon how well work is planned, to predict the probability of project success.

The revamped Schedule Cleanser™ automates processes that can take scheduler hours i.e., converting lags to activities. Using the Schedule Cleanser, users can manage activities flagged for cleansing one-by-one. The calendar forensics feature promises owners and contractors the ability to track calendar changes across schedules updates easily and quickly. Along with Fuse 360's intelligent acceleration, the Fuse 3.1 release will continue to provide newer, faster, better solutions for project teams.

The Acumen Fuse World Tour will stop in Australia, Malaysia, China, the United Arab Emirates, Qatar, and the United Kingdom. Acumen World Tour partners are Fortior Global (www.fortiorglobal.com), Milestone (www.milestoneuk.com), Great Idea (www.pm360.com), Projeqz (www.projeqz.com), and CMCS (www.cmcs.co).
