

TIG Enterprise Roadmap

(TIGER)

Technology Integration Group

TIGER provides the Alignment of IT Investment with Strategic Business Initiatives

Delivering Information Technology through Strategic Business Alignment

With a strategic approach to architecting our solutions, and to align to business initiatives, TIG utilizes our TIG Enterprise Roadmap (TIGER) methodology. This process applies a gap analysis approach, which compares a detailed understanding of your current environment to that of our TIGER architecture, thereby aligning IT infrastructure with business demands. The delivered roadmap is based on a comprehensive discovery of the technical and, more importantly, business requirements of the organization. TIG industry experts work with IT management to determine the best course of action to migrate IT infrastructure towards an ideal state within the confines of current business requirements. TIG then works to insure that as business requirements change we are adapting the long-term plan to maintain alignment with changing organizational goals and technology.

TIGER Architecture

TIGER architecture is a secure, flexible, and dynamic framework designed strategically based on our clients business objectives.

Supporting integrated voice, video, data, and mobility, TIG's Enterprise Roadmap architecture leverages our core technology partners to securely and cost effectively operate their IT infrastructure.

This customized architecture enables clients to build enterprise class IT frameworks with security techniques built around integrated solution sets that simplify planning, design, implementation and management.

TIGER Benefits

Supports IT initiatives at all levels including:

- Network readiness for critical business applications
- Enables business growth objectives
- Increased reliability with lower risk
- Allows for repeatable low cost standards based approach
- Builds "IT Roadmap for Success" based on TIG Best Practices

TIGER Process

- Understand IT constraints as it relates to the key Initiatives of the Business
- Determine "Current State" of IT infrastructure
- Align Enterprise Roadmap with Business Initiatives
- Develop Enterprise Roadmap based on Business Initiatives
- Provide timeframes and budgets
- Present Strategic TIGER Architecture
