

TiggziSM Mobile App Builder — the easiest way to build apps and consume API services

Tiggzi, by Exadel, is the perfect way to leverage client-cloud architecture.

Discover Tiggzi Mobile App Builder, a cloud-based cross-platform development environment. Tiggzi enables developers to easily connect to and consume cloud services, such as “RESTful” APIs.

Tiggzi creates finished, fully functional mobile applications for smartphones and tablets on iOS, Android, Blackberry, and Windows Phone platforms. Write apps once and deploy on any device, reducing development effort and improving time-to-market.

Tiggzi’s visual editor provides drag-and-drop access to a rich set of visual components and a unique repository of prepackaged REST (API) services.

Create and publish cross-platform mobile applications using HTML5, CSS, and JavaScript and building on popular frameworks like jQuery Mobile and PhoneGap.

Tiggzi’s real-time collaboration features let developers harness the contributions of other development teams, business analysts, and customer focus groups to improve time-to-market.

What our community is saying about us

“Using Tiggzi for creating our mobile app took all the guesswork out of the process. Tiggzi was spot on!”

“Tiggzi is a gamechanger for us and opens doors to many more projects.”

“Our developer community has doubled in size since we offered Tiggzi as a part of our store.”

“I found your product very interesting and to be more precise - usable in the real world, even for production class apps! ...unlike other ‘similar’ products found online.”

“Would like to let you know that Tiggzi is just amazing. I think It is ‘the rocket fuel’ for mobile development. I have tried with Sencha-Phonegap manually, AppMobi, a little bit on Appcelerator, etc. and Tiggzi is the best tool.”

Build mobile apps faster, write less code, have more fun!

- Rapidly implement your mobile strategy
- Prototype in minutes
- Build complete apps with uncanny ease
- Tiggzi is your cross-platform solution
- Focus on your business, not the technology
- Slash time-to-market

Tiggzi Features

- **Visual Designer:** Easy drag-and-drop editor leverages a rich set of UI components and provides visual data-binding between these UI components and data sources such as cloud services and network assets.
- **Collaborate:** Tiggzi is the only mobile app development platform that provides real-time collaboration between development teams and business users and supports the full development lifecycle from prototypes to product-ready applications.
- **Integration:** Seamlessly connect to remote services, and integrate with UI components through Tiggzi's convenient visual mapper. It's the easy way to connect to any REST service.
- **Write Once, Deploy Anywhere:** Deploy on all of the major platforms — iOS, Android, Blackberry, and Windows Phone (using PhoneGap integration).
- **Client-Cloud Architecture:** Residing in the Cloud, Tiggzi requires no download and provides the easiest way to consume cloud services.
