

MetaMoJi releases on-screen writing experience Survey for 30 Android tablet and Smartphone devices

Tokyo, Japan, February 29, 2012

MetaMoJi Corporation, an innovative productivity application developer for tablet and smartphone devices, is pleased to offer the results of their current research to evaluate the handwriting experience delivered by Android devices, using both finger and stylus.

The survey report covers more than 30 devices, with a continuing commitment from MetaMoJi to evaluate even more in the future.

MetaMoJi has spent the past few months testing fingers and styluses on a variety of Android devices, focusing primarily on the control, feel, and fit of the applications when writing. The Android version of 7notes, used to perform the handwriting tests, is currently available for Beta testing and is due for general release in March 2012. 7notes' state-of-the-art handwriting recognition engine, Mazec, allows users to take notes on the go using their fingers or a pen. In addition consumers can use 7notes' capabilities inside other Android applications such as e-mail, Twitter, and their web browser. The product was selected as "Best Business Android Application" in the recent R25 awards. According to the R25 judges, the app won the awards due to its outstanding usability and effectiveness as a note taking tool.

The survey results can be accessed from our website at
