Actuarial Services

The management of employee health benefit plans has become a dizzying task for today's employers. Ever expanding regulatory requirements, unstable cost structures and an unpredictable future combine to create a deeply challenging environment. The Patient Protection and Affordable Care Act, which was signed into law in 2010, has brought additional concern and uncertainty.

*Sometimes you need
a closer look...*

Medcom's actuarial services are designed to empower employers by providing the detailed information needed to successfully navigate through the complex world of healthcare benefit planning. Our analysis delivers an in-depth examination of current benefit policies, renewal options and future prospects. Armed with actuarially sound cost projections and risk assessments, employers are able to make cost saving decisions that will work proactively over the long term.

Medcom's actuarial services cover a wide range of reporting and planning needs:

Cobra Rate Certification

Develops COBRA rates for self-funded or partially self-funded plans and HRAs and provides a letter of certification for the rates.

HRA Cost Projection & Design Assistance

Calculates the expected HRA fund usage for a prospective HRA plan design. Multiple options can be included to aid employers in making decisions regarding the design of an HRA plan

Funding Analysis Report

Includes:

- Analysis of the company's claims trend using actuarial principles and regression analysis
- Assessment of feasibility to self-insure including appropriate specific and aggregate stop loss levels
- Actuarial cost estimate including projected retained claims and estimates of expenses including reinsurance, administration and consulting fees under self-funded arrangement options

Renewal Cost Analysis for Fully Insured Plans

Analyzes the employer group's claim history to detect trends and provide insurance carriers with a comparison renewal calculation.

Incurred But Not Reported (Terminal Liability) Claim Reserve Reporting

Calculates the IBNR or terminal liability reserve for self-funded or partially self-funded plans.

Healthcare Reform "Pay or Play" Modeling

Develops scenarios in preparation for key changes which are scheduled to take effect under PPACA in 2014. The following considerations are highlighted:

- Actuarial value and affordability of current plans and possible alternatives
- Employees eligible for subsidies at the Exchange
- Penalties that might be incurred by the employer
- Wage gross-up required to keep employees whole if they buy a comparable policy at the exchange
- Employee costs including contributions, out-of-pocket medical expenses and the tax consequences under various options

About Brad Vernon

Brad Vernon serves as Medcom's Consulting Actuary. He is a fellow of the Society of Actuaries (FSA) and a Member of the American Academy of Actuaries (MAAA). Brad has served as a staff actuary for a large insurance carrier and a highly rated employee benefits administration and consulting firm. His work has included plan performance reviews, stop loss pricing for self-funded cooperatives, plan design modeling, HRA and HSA design and modeling, Medicare Part D attestation preparation, COBRA rate development and other services. Brad adds a new dimension to the Medcom team in serving leading employee benefit consultants and employers.

A CLOSER LOOK AT **COBRA Rate** CERTIFICATION

Both HRAs and Self-Funded Plans typically establish a maximum claims liability limit for an employer that is rarely reached. Claims may also fluctuate from year to year which creates challenges in terms of how to develop valid COBRA premium rates.

So, where do you start? The COBRA legislation defines “applicable premium” as the cost to the plan of providing coverage to similarly situated beneficiaries who have not experienced a qualifying event. This applicable premium must be determined prior to each 12-month determination period.

Medcom works with employers to actuarially determine the appropriate COBRA premiums based upon their plan design, demographics and prior claims history, if available. Plan sponsors should strongly consider a sound, actuarially determined method for establishing these premium rates. A plan is permitted to charge a qualified beneficiary up to 102% of the applicable premium.

Medcom provides fully certified COBRA premium rates for both HRAs and self-funded plans using the most appropriate method on a case by case basis.

A CLOSER LOOK AT **HRA Cost Projection** & DESIGN ASSISTANCE

One of the growing strategies for employers in achieving lower healthcare costs includes the use of a Health Reimbursement Arrangement (HRA) with their underlying “core” medical plan. When an employer creates an HRA, they generally start by reducing the costs in their core medical plan by shifting more of the risk to plan members. Then, they allocate some portion of the resulting financial savings to the HRA Plan, which essentially operates as a limited self-funded plan, designed to assist plan members in offsetting some of their higher deductibles and copayments.

HRAs may be constructed in a number of different ways depending upon the budget and philosophy of the employer. Without professional guidance, it is often difficult for employers to accurately project the claims utilization of their HRA plan(s) in advance.

Medcom offers a “turnkey” solution for employers in developing an actuarially sound projection of HRA costs as a part of our actuarial portfolio of services. Frequently, we work closely with employers in “modeling” several HRA plan designs up front so that they may develop the best solution for their program.

A CLOSER LOOK AT **Funding Analysis**

REPORTS

Larger employers generally have two distinct financing methods for their group health insurance. First, they may select a “fully insured” funding approach where the insurance carrier provides a guaranteed premium for the twelve (12) month plan year. In this case, the carrier takes all of the financial risk and provides comprehensive administration for all facets of the program.

An alternative way for funding an employer sponsored medical coverage program is a self-funded financing method. With the self-funded method, the employer generally assumes more risk but has the potential for saving a significant amount of money.

In addition to the increased risk exposure, the employer is also more engaged with managing other aspects of the plan including but not limited to reinsurance selection and oversight, comprehensive administration of the program and managed care decisions.

The viability of using one funding method versus the other is a function of overall employer risk management strategies, the competitiveness of the reinsurance market and the relative competitiveness of fully insured carrier premiums in the market. Employers frequently transfer from one method to the other as market conditions change.

Medcom provides employers with a professional evaluation of all financing options so that they may select the best option for their firm. Our analysis also provides employers who self-fund with an actuarially sound projection of future costs, a review of stop loss levels, and an unbiased comparison to carrier stop loss pricing. We start with a historical analysis of the company’s medical claims trends using actuarial principles and regression analysis. Next, we project an actuarial cost estimate of self-funding the medical coverage program using appropriate specific and aggregate stop loss levels. Lastly, we provide information from our statistical models regarding expected cost, variability, confidence intervals and probability of reaching the maximum liability under the different stop loss levels examined so that an appropriate choice can be made by the employer.

Medcom is strategically positioned to assist employers with the selection of the most appropriate financing option for their group medical coverage program.

*“The farther backward
you can look,
the farther forward
you can see”*

-Winston Churchill

ANALYSIS

With the consolidation of medical insurance carriers and medical coverage options over the past ten years, it is frequently difficult for employers to secure more than three or four competing bids when they renew their health insurance coverage each year. Depending upon the demographics of the employer and their medical claims history, the actual number of potential bidders may be as few as two. So, where does an employer look for an objective evaluation of their medical coverage renewal costs? Medcom.

We provide a comprehensive analysis of the medical claims history for the group in order to detect prevailing trends and an actuarial projection of where the premiums should be targeted for the next year. We frequently uncover mathematical mistakes, overinflated fees for line items like carrier “pooling charges” and other areas where a “second opinion”

from a certified actuary may make a significant difference. In a worst case scenario, we may end up validating the renewal levels established by the carrier and support their position.

Healthcare costs are much too high to leave a renewal projection to chance. A three (3%) percent reduction in cost on a \$5,000,000 renewal premium that directly results from a rigorous actuarial analysis will transfer \$150,000 to the bottom line.

Medcom is positioned to assist employers of all sizes in evaluating the financial impact of their plan renewals. Many of our clients and insurance consultants engage us annually to make absolutely sure that all of their renewal options have been fully explored.

COMPUTATION

Many employers elect to take a more proactive approach in managing their group health care costs through a self-funded or partially self-funded financing method. One of the key differences between a fully insured plan and a self-funded plan is the basis for financially accounting for each plan year. When an employer purchases a plan from an insurance carrier, the policy typically includes all expenses that are incurred during the plan year. However, when an employer sponsors a self-funded plan, expenses are booked in the plan year in which they are paid. This means that at any given point in time the employer has a liability for claims “incurred but not yet reported” (IBNR). This ongoing claims liability should be projected on an annual basis as an IBNR reserve.

There are a number of reasons why a professionally prepared IBNR reserve calculation is important. First, the employer should know the magnitude of their unpaid claims liability for financial reporting and planning purposes. Second, this data enables the employer to better compare reinsurance policies and alternate funding arrangements at each renewal. Finally, it is important for employers to track their total benefit costs and the IBNR should be incorporated into this evaluation.

Medcom’s professional actuarial team works closely with employers in the development and certification of the IBNR reserve on either a quarterly or annual basis.

A CLOSER LOOK AT **Healthcare Reform**

“PAY OR PLAY” MODELING

An important aspect of healthcare reform under the Affordable Care Act (ACA) is the creation of state run health exchanges beginning in 2014. These exchanges will offer guaranteed issue individual coverage with many enrollees qualifying for government subsidies. ACA will also penalize employers who fail to offer group medical coverage to their employees at that time. Because of these two significant changes, employers will now be faced with the decision to "Pay or Play" when health benefit exchanges become available in 2014.

Employers may either drop coverage altogether and "Pay" penalties, or they may continue to provide group medical coverage and "Play." Medcom recognizes the challenges faced by employers in making this difficult and complicated decision. Our Pay or Play Modeling service provides employers with the necessary tools to make a sound business decision.

This service utilizes sophisticated actuarial modeling techniques to examine the financial implications of all available options. All of our final projections and recommendations are presented in easy-to-understand terms. We perform a comprehensive analysis of the Pay or Play factors using the following considerations:

- Determining the actuarial value and affordability of the current plan(s) as well as alternative plans

- the employer may be considering
- Identifying all employees who are eligible for subsidies at the State Exchange
- Quantifying employer penalties for not providing medical coverage
- Measuring tax implications for all scenarios examined
- Summarizing all employee costs, including contributions, out-of-pocket medical expenses and tax consequences under all options
- Projecting wage gross-up required to keep employees whole if they buy a comparable policy at the exchange

Our analysis will assist employers in understanding the overall projected costs for both the corporation and its employees in all types of potential plan and coverage scenarios. We will also examine the financial burden of each potential arrangement for individuals and subgroups of employees such as key employees.

Medcom has the resources and professional expertise to help employers fully understand all of the costs associated with the different options available under the Healthcare Reform legislation.

Why wait until 2014 to evaluate your potential risks under ACA? Medcom is prepared to help you today!
