Oxygen Forensic Suite 2012 4.1 Offers Deeper Investigation with Aggregate Data Analysis

Oxygen Software updates Oxygen Forensic Suite 2012, the company's flagship mobile forensic tool, adding numerous enhancements to version 4.1. The new release allows investigators aggregating suspects' contacts, accessing them from multiple sources in a single view. The newly added Messengers group aggregates suspects' contacts and communications across different types of instant messengers. In addition, two more Web browsers are added, global search and export engine improved.

Aggregate Data Analysis

Oxygen Forensic Suite 2012 4.1 adds a number of aggregate data analysis options, allowing forensic specialists to analyze suspects' contacts and communications across the different types of sources.

"By aggregating the analysis across a variety of sources, we're giving investigators an invaluable tool", says Oleg Fedorov, Oxygen Software CEO. "It now becomes possible to view suspects' communication circles, analyze contacts and review communications carried over various sources. The new release greatly simplifies and speeds up the analysis, allowing a more thorough analysis to complete sooner".

Aggregated Contacts

Oxygen Forensic Suite 2012 4.1 adds support for the Aggregated Contacts section, allowing forensic specialists to analyze contacts from multiple different sources such as the Phonebook, Messages, Event Log, Skype, Gmail and Yahoo apps, Foursquare, and so on. By enabling aggregated contacts analysis, Oxygen Forensic Suite 2012 greatly simplifies investigators' work and allows discovering relations and dependencies that could otherwise escape the eye.

Instant Messenger Conversations at a Glance

The newly added Messengers group accumulates the analysis of data available from a range of instant messengers. Supporting Facebook Messenger and Yahoo! Messenger for Android OS devices, Whatsapp, Kik Messenger, Touch (formerly PingChat!) for Apple and Android OS devices, Oxygen Forensic Suite 2012 4.1 extracts all important information and enables access to suspect's messages and conversations, reconstructs communication circles, allows viewing uploaded images etc.

Support for New Mobile Browsers and Other Improvements

Version 4.1 of the company's flagship forensic product adds support for two additional Web browsers: SkyFire for Apple iOS devices and Dolphin Browser Mini for Android OS, extending the list of applications available for analysis even further.

Other improvements include a re-worked interface in the Global search panel and a new export engine for faster generation of comprehensive reports.

About Oxygen Forensic Suite 2012

Oxygen Forensic Suite 2012 helps investigators and forensic specialists access and analyze data from a variety of mobile devices such as cell phones, smartphones, communicators, PDA and tablet PCs. Currently supporting more than 3,500 different models, Oxygen Forensic Suite 2012 covers the widest range of mobile devices compared to competition, and allows fully automated acquisition and analysis of supported devices.

The unique Timeline feature offers convenient, single-place access to all activities and movements performed by the user arranged by date and time. Investigators can track user location at every moment, build and map their historic routes, and clearly see all activities performed by the user at each location.

Another signature feature of Oxygen Forensic Suite allows investigators performing a global search on all devices ever analyzed with the toolkit. The global search quickly reveals any connections (e.g. common contacts, exchanged calls, texts or emails) between the phone owners.

Oxygen's statistical analysis tools allow investigators discover social connections between the users of multiple mobile devices. Calls, text messages and Skype conversations are analyzed to produce charts and tables revealing the users' closest circle at a glance.

Oxygen Forensic Suite 2012 guarantees zero-footprint operation, leaving no traces and making no modifications to the content of the devices, making it the tool of choice among government and law enforcement agencies, security services and forensic organizations in more than fifty countries.

About Oxygen Software

Founded in 2000, Oxygen Software offers the most advanced forensic data examination tools for smartphones and mobile devices. The company is dedicated in delivering the most universal forensic solution covering the widest range of mobile devices running Symbian, Windows Mobile, Blackberry, iOS, and Android operating systems. As a result, Oxygen Forensic Suite receives great response at forensic conferences, exhibitions and trainings, and occupies a spot in the top of the list in relevant tests for extracting more data than competition.
