

*IT Asset Management Made Easy*

## Benefits

- **Ease of Use**

EMS requires minimal training to fully utilize its many features and is easier to use than most other asset management products in its class.

- **Save Money**

Knowing the inventory of hardware and software is critical when deciding whether to purchase additional IT assets, redistribute current assets, or retire them completely - along with their costly maintenance contracts and renewal fees. EMS serves as a valuable budgeting tool.

- **Save Time & Keep PCs Current**

The flexibility and multi-delivery options of EMS's software distribution feature makes it easy to keep PCs up to date without utilizing unnecessary resources or personnel time.

## Streamline IT and Reduce Costs with EMS

CrossTec EMS is a simple to use and cost effective IT Asset Management system that provides IT Administrators with an accurate, up-to-date picture of IT resources. EMS offers essential tools for monitoring, incident resolution, budgeting, planning, and asset life cycle management, including: Software Distribution, Hardware and Software Inventory, Application and Internet Metering, and optional integration with CrossTec Remote Control and ResQDesk.

By providing both deep intelligence and a broad picture of the IT landscape of an organization, EMS will help eliminate waste and redundancy and increase compliance with the ever-tightening government regulations.

In addition, reduce your operating costs while decreasing your carbon footprint by leveraging the Energy Monitoring feature of CrossTec EMS.

## Features

### • Software Distribution

Flexible multi-delivery option distributes software packages to targeted PCs, departments, or to the entire organization.

### • Inventory Management

Capture the full hardware and software inventory on every PC. Track this information over time to detect unauthorized additions or modifications to a target PC's hardware or software configuration. View and report on inventory summaries for the entire network or drill down into each individual PC for detailed information about software and hardware configurations.

### • Application Metering

Reports on all applications used on a target PC, detailing all times the application was started and finished, and the actual duration of use. Data can also be viewed at a department level.

### • Internet Metering

Provides a detailed summary of Internet (or Intranet) activity on a user's PC. EMS will also monitor current URL viewing levels across the organization.

### • Alerting and Warning

Powerful PC and network alerting of potential issues.

### • Modular Design

Users dictate what is included; can integrate with Remote Control and Help Desk software.

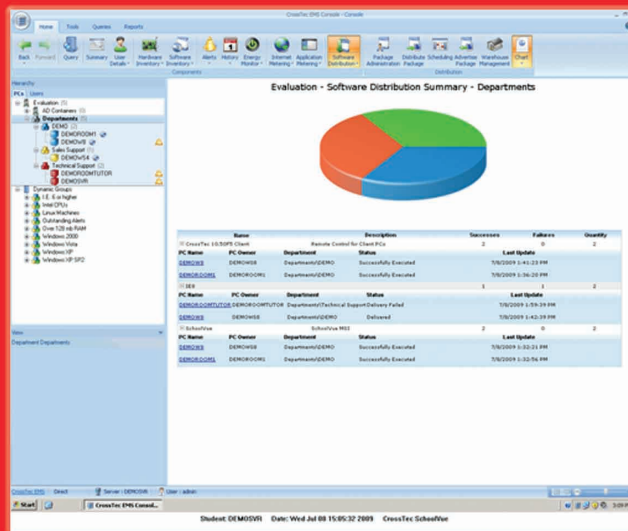

### • Energy Monitoring

Reduce operating costs and decrease your carbon footprint by tracking asset energy use.
