*When you know there is a problem,
but you don't know what it is -
Eye P.A. is the first-step,
go-to tool for understanding
Wi-Fi networks.*

**Eye P.A. is a 802.11 troubleshooting tool
designed for Wi-Fi professionals.**

Eye P.A. transforms bits and bytes of a .pcap file into color-coded multi-layered pie charts, helping you to quickly troubleshoot wireless networks without the hassle of setting filters.

Before Eye P.A., professionals navigated through dense streams of packet data looking for a needle in a haystack.

Eye P.A. transforms raw packet capture streams into a visual network conversation, highlighting Bytes, Packets, and Time. Making it easy to drill down and quickly diagnose network issues, Eye P.A. also includes export to Wireshark.

Stay up to date - buy Eye P.A. today and get one year of software maintenance for free.

System Requirements

While installing Eye P.A., you will be assisted with downloading these required components if you don't have them.

**Microsoft .NET Framework 4
WinPcap**

Works With

Microsoft® Windows XP or newer

Quickly Identify Issues

See the relationship between Packets, Bytes, or Time within your network, selected AP, or conversation.

Analyze Conversations

Visually see network conversations between clients & access points.

Diagnose Network Health

Drill down into a .pcap file to examine data rates, data types, & retry rates.

Export To Wireshark

Send your findings to Wireshark for more in-depth analysis

**USE WITH:
802.11 .pcap files**
