

BCS Global Launches “iViewReplay”, a Simple and Easy-to-Use Solution to Record and Webcast Video Conferences

This new feature is part of iView – Powered by Vidyo, and enables users to record and webcast their video meetings via a web browser

London, United Kingdom – April 3, 2012 – BCS Global Networks Limited, a leading worldwide provider of managed videoconferencing, telepresence, and visual collaboration services, today announced the launch of iViewReplay, a new feature for its mobile enterprise video services suite.

iViewReplay is an easy-to-use service that allows users to record and webcast their video meetings, and watch them any time in the future. Users of iView - *Powered by Vidyo* can record and webcast video conferences conducted from their mobile video endpoints, including laptops, desktops, smartphones and tablets powered by iOS and Android.

With iViewReplay, every iView - *Powered by Vidyo* endpoint is a “content creation station”. With a single mouse click, users with recording permissions can record and / or webcast product announcements, medical procedures, lectures & training sessions, or any other video conference.

Users of iView - *Powered by Vidyo* can have total control and flexibility to set permissions for user groups, controlling who is able to record, webcast, and access stored content. Since recorded video conferences are stored in .FLV format, no proprietary client is required to view the content - any standard flash player plug-in will do.

iViewReplay Benefits:

- Record and webcast in .FLV Format
- Webcast video conferences are now cost effective to all participants - as all that is required to view a webcast is a standard web browser
- Every iView - *Powered by Vidyo* endpoint can become a “content creation station”

Announcing the launch, **Mark Matone, Head of Products** said “iViewReplay is an important addition to the iView - *Powered by Vidyo* service; this new feature will now allow users to record valuable interactions via video conferences. The service is simple to use and can be accessed by anyone from anywhere, anytime – opening up a plethora of business applications.”
