## **Entrada partners with NextGen Healthcare to offer integrated workflow solution**

### **DOCUMENTATION SOLUTION ENABLES MOBILE DICTATION, SPEECH-TO-TEXT AND DATA INSERTION**

NASHVILLE, Tenn., April 11<sup>th</sup>, 2012 — [Entrada](#) has entered into a corporate partnership with NextGen Healthcare to integrate its clinical documentation technology with [NextGen® Ambulatory EHR](#) and [NextGen® Practice Management](#) system. The corporate partnership provides NextGen Healthcare the ability to offer Entrada's products and services to current and future NextGen Healthcare clients.

"We have always had a productive relationship with NextGen Healthcare, as we have achieved a high-level of integration with its systems and have many common clients," notes [Bill Brown](#), CEO of Entrada. "The two companies work well together, and we look forward to building new, integrated solutions that continue our promise to protect physician productivity before, during and after implementation of the NextGen EHR system."

Entrada's clinical documentation technology enables physicians to continue dictating while using the NextGen Ambulatory EHR, without being slowed down by the necessity to type or self-edit any voice-recognized text. After syncing with NextGen's Practice Management system to build a daily worklist, a physician simply dictates a note, and Entrada automates and edits the text conversion and then inserts the finished work directly into individual narrative text fields within NextGen Healthcare templates. Entrada's cross-platform solution is available on all Apple iOS and Windows Mobile devices as well as on PCs and can be customized to fit unique workflows on a client-by-client basis.

Several hundred physicians have already adopted Entrada's solution for use with the NextGen Practice Management and/or Ambulatory EHR system. With the official corporate partnership, NextGen Healthcare continues its history of leveraging strategic partnerships with qualified organizations to ensure the highest quality client experience with NextGen® solutions.

"Providing our clients with the best solutions available is essential to enhancing productivity and the quality of patient care," said [Scott Decker](#), President of NextGen Healthcare. "This collaboration with Entrada will provide our clients the flexibility needed to capture patient data and effectively populate it through our powerful reporting engine. Leveraging Entrada's clinical documentation technology will compliment the breadth of our software capability."

### **About NextGen Healthcare**

Follow NextGen Healthcare on Twitter at [www.twitter.com/nextgen](https://www.twitter.com/nextgen) or Facebook at [www.facebook.com/NextGenHealthcare](https://www.facebook.com/NextGenHealthcare).

## About Entrada

Entrada is a healthcare technology company who provides a documentation workflow solution that protects physician productivity and revenue by enabling physicians to continue dictating before, during and after the migration to an EHR. Entrada's cross-platform solution, available for Apple iOS, Windows Mobile and PC platforms, saves time and money for doctors who can't afford to be slowed down by having to type or self-edit their own voice-recognized text. Entrada's solution enables the capture of the narrative portions of the note, woven alongside structured data, to support chart completion.
