Press Release

For Immediate Release

Foster City, CA -- Monday, April 16, 2012 -- **The GridGain ecosystem around real time big data processing expands this week with greater support for Windows based infrastructure and cloud platforms.**

GridGain Systems, makers of widely adopted open source software used to build smarter and faster data processing systems within finance, retail, healthcare, telecommunications, government and other markets, has expanded its ecosystem this week to natively support customers and services written for Microsoft Windows-based data centers and Microsoft's Azure cloud hosting platform. GridGain Systems' Java based open source middleware platform allows companies to perform real time processing and analytics on live big data.

GridGain, an innovative technology company founded in 2005 and funded by RTP Ventures, has quickly built a strong following in the Java and Scala developer communities, and already offers Java and Android language clients. The company's latest release enables .NET developers to further integrate GridGain technology directly into their .NET applications and Windows based services. In coming months, support for iOS (Objective-C), Ruby, PHP, Python, and Node.js will be available as well, further expanding GridGain's reach deep into web and mobile app development.

Recently named one of this year's *20 Coolest Cloud Platform and Development Vendors* among a field including RedHat, Cloudera and GigaSpaces, GridGain provides a uniquely robust and integrated compute and in-memory data grid

technology. GridGain helps its customers easily utilize any amount of processing power, from one to thousands of servers hosted on virtually any private or public cloud platform such as Rackspace OpenStack, Amazon EC2 and Microsoft Azure.

GridGain is open source and available in a free Community Edition (GPLv3), an OEM Edition, and a commercial Enterprise Edition which includes tools for management and monitoring, simplified cloud deployment, and an advanced security infrastructure, in addition to maintenance, certification, training, support indemnification and escrow services.

About GridGain Systems

GridGain Systems' Java based open source middleware platform allows companies to harness live, big data for smarter, faster real time processing and analytics. Every 10 seconds, an installation of GridGain is started somewhere around the globe. Our customers include innovative web and mobile businesses, leading Fortune 500 companies, and top government agencies. GridGain is headquartered in Foster City, California.
