STEELPIVOT
THE LINUX RESOURCE

Top 8 Reasons We're Better Than The Rest

1 Our training covers the entire range of experience needed to be an expert Linux engineer. Our **focus is on the complete engineer**, not just the basics of Linux or how to use a particular vendor's product.

2 We believe that people learn best in small group environments. That's why our classes are limited to **no more than eight (8) students,** and taught by **two (2) instructors who are also working senior Linux engineers** employed full-time by SteelPivot. When they're not teaching class, *they practice what they teach* while identifying and solving real client problems.

3 You will be taught in a **hands-on lab** where we encourage you to experiment and take risks - preparing you to work confidently in a full production environment. **We give you two Linux servers to work on during class**, and when something "breaks" or you encounter a problem, we teach you how to troubleshoot and fix it.

4 **Our classes aren't easy.** In fact, they're downright hard. Think of it as an **intense workout for your engineering brain**. If you're not ready to sweat the details and work harder than ever before, our classes aren't for you.

5 In order for you to be successful and get the most out of the training, **we have to know that you're in the right engineering shape and at the right level** for the class you want to take. That's why **pre- and post-tests are mandatory for every class**. Besides making sure you're in the right place, they're a great way for you to **benchmark your own progress**.

6 We're not exaggerating when we describe our classes as "fully immersive". Your learning experience is **100% hands-on and passive participation is not an option**. When you finish our class, **you will truly know Linux**.

7 **We care about how you apply what you've learned** after you leave our classroom. That's why we extend your learning experience with **30 days of free email support** from our engineering team and **30 days of free access to our virtual Linux lab**.

8 We have an incredible **passion for Linux**, a **clear focus on business** requirements, and a **commitment to share what we know**. While other training companies use a cookie-cutter curriculum provided by specific Linux vendors, we know that's not good enough. **We develop our own training materials** so you learn everything you need to know to *master* **Linux, not just to pass a certification test.**
