Updated Oxygen Forensic Suite 2012 Features New Productivity Section, Supports More Android Browsers and Messengers, and Boosts Exporting Speeds

Oxygen Software updates Oxygen Forensic Suite 2012, the company's flagship mobile forensic tool, offering a number of productivity, compatibility and performance improvements. A new aggregated view offers at-a-glance access to information stored in common mobile productivity applications such as Dropbox, Evernote and Remember The Milk. Two new Android OS messengers are supported, Textie and HeyTell. In addition, four more Web browsers for the Android platform are also supported, including Atomic, Ninesky, UC Browser and UC Browser Lite. Minor improvements to Communication Statistics and brand-new exporting engine are added.

Investigating Productivity Apps, Document and File Exchange Applications

The latest release of Oxygen Forensic Suite 2012 adds support for two more mobile productivity applications for both Android and iOS platforms, Evernote and Remember The Milk. Together with Dropbox, these applications now form the new Productivity (Business) group. Available to Analyst license holders, the new Productivity group offers at-a-glance access to tasks, notes, account settings, shared photos and documents, and files uploaded with supported applications.

Two New Messengers and Four Mobile Web Browsers Supported

Oxygen Software is committed to extending forensic support for popular communication and Web browser tools. This new release of Oxygen Forensic Suite 2012 adds support for two Android-based instant messenger applications: Textie and HeyTell. Account details, communication logs and contact information are available.

In addition, four additional Android OS Web browsers are now supported: Atomic, Ninesky, UC Browser and UC Browser Lite. Web browsing history, stored bookmarks, cached files and cookies can be retrieved and analyzed. Support for the new Web browsers and messengers will be available to users of PRO and Analyst licenses.

New Export Engine

The latest release of Oxygen Forensic Suite 2012 features an all-new exporting engine. The new exporting engine runs faster and consumes less memory than the version it replaces, offering less wait time and better performance when saving information extracted with Oxygen Forensic Suite 2012 into third-party formats.

Improved Communication Statistics

The Communication Statistics section updated with minor improvements including the ability to calculate common statistics for multiple devices, adding a date range filter and offering other enhancements to make experts' job easier.

About Oxygen Forensic Suite 2012

Oxygen Forensic Suite 2012 helps investigators and forensic specialists access and analyze data from a variety of mobile devices such as cell phones, smartphones, communicators, PDA and tablet PCs. Currently supporting more than 4,000 different models, Oxygen Forensic Suite 2012 covers the widest range of mobile devices compared to competition, and allows fully automated acquisition and analysis of supported devices.

The unique Timeline feature offers convenient, single-place access to all activities and movements performed by the user arranged by date and time. Investigators can track user location at every moment, build and map their historic routes, and clearly see all activities performed by the user at each location.

Another signature feature of Oxygen Forensic Suite allows investigators performing a global search on all devices ever analyzed with the toolkit. The global search quickly reveals any connections (e.g. common contacts, exchanged calls, texts or emails) between the phone owners.

Oxygen's statistical analysis tools allow investigators discover social connections between the users of multiple mobile devices. Calls, text messages and Skype conversations are analyzed to produce charts and tables revealing the users' closest circle at a glance.

Oxygen Forensic Suite 2012 guarantees zero-footprint operation, leaving no traces and making no modifications to the content of the devices, making it the tool of choice among government and law enforcement agencies, security services and forensic organizations in more than fifty countries.

About Oxygen Software

Founded in 2000, Oxygen Software offers the most advanced forensic data examination tools for smartphones and mobile devices. The company is dedicated in delivering the most universal forensic solution covering the widest range of mobile devices running Symbian, Windows Mobile, Blackberry, iOS, and Android operating systems. As a result, Oxygen Forensic Suite receives great response at forensic conferences, exhibitions and trainings, and occupies a spot in the top of the list in relevant tests for extracting more data than competition.
