

# OrangeLT™ | Remote Collection with Legal Hold

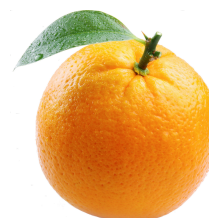

## Remote Collection with Legal Hold Service

Provided in partnership with TotalDiscovery.com, the Remote Collection with Legal Hold Service helps law firms and corporations conduct the critical eDiscovery tasks of data collection and legal hold for multiple sources from multiple locations without incurring the burdensome time, cost and equipment expenses associated with traditional onsite data collection and legal hold automation approaches.

## Integrated. Defensible. Efficient.

Delivered from the industry's only integrated legal hold and document collection system, TotalDiscovery.com is Software-as-a-Service (SaaS) enabled and web accessible. This approach allows users to defensibly and efficiently execute legal holds and remote collections. Additionally, collected ESI can also be processed and filtered for use with leading industry review platforms to include the OneO® Discovery Platform from Orange Legal Technologies.

Service Task	Task Description
<b>Legal Hold</b>	Manage Legal Hold Notifications and Acknowledgements.
<b>Remote Collection</b>	Remotely Identify and Collect Electronically Stored Information (ESI).
<b>Process and Filter</b>	Process and Filter Collected ESI in Preparation for Attorney Review.
<b>Deliver ESI</b>	Deliver ESI for Use with Leading eDiscovery Review Platforms.

## Centralized. Flexible. Automated.

**Legal Hold** provides users with a simple-to-use solution that eases the burdens of legal hold management and can be implemented without any software to install or hardware to purchase. Within minutes, a new Legal Hold can be created and distributed, complete with acknowledgement tracking, automated reminders and detailed audit reporting. All of these tasks are completed from a secure user interface, and once completed, users are guided through the process of remote collection.

**Remote Collection** provides users with the ability to collect remotely from multiple custodians simultaneously and receive live updates on the status and amount of ESI collected. With no software to install and with minimal business disruption, collections are initiated via email notification, followed by wizard driven instructions for using TotalDiscovery.com's proprietary DiscoveryBOT™ remote collection application. Once complete, the collected ESI can then be further processed and filtered.

**Processing and Filtering** provides capabilities that enable users to catalogue, store, index, search and filter collected ESI to both reduce data sets to manageable levels, and to allow users to make early data assessments regarding potential overall eDiscovery costs, legal strategy and settlement options. Once ESI has been processed and filtered, users can easily export **Deliver ESI** for use in leading eDiscovery review platforms.

# OrangeLT™ | Remote Collection with Litigation Hold

Where does the Litigation Hold and Remote Collection Service fit in the eDiscovery Process?

## Efficiency. Expertise. Infrastructure.

In addition to the **Remote Collection with Litigation Hold Service**, OrangeLT offers a complete suite of electronic discovery technologies and professional services for the collection, analysis, processing, review and production of digital and paper-based information. While providing expert staff to support knowledge intensive services ranging from forensic data collection to managed attorney review, OrangeLT supports core services with its proprietary OneO® Discovery Platform. The **OneO Discovery Platform** is an advanced technology platform that provides clients integrated, web-accessible online analytics (early case/data assessment), and processing and review of electronically stored information (ESI) from the security of a hosted centralized repository. By leveraging both the Remote Collection with Litigation Hold Service from TotalDiscovery.com, and the OneO Discovery Platform, users can manage ESI across the entire spectrum of the litigation lifecycle from legal hold to ESI production.

## About Orange Legal Technologies

As a leading provider of electronic discovery technology and services, Orange Legal Technologies has worked with some of the world's most well known corporations and law firms and has been recognized in leading analyst and media publications from such organizations as Gartner<sup>1</sup>, IDC<sup>2</sup>, The 451 Group<sup>3</sup>, and Forbes magazine<sup>4</sup>. While our background is proven and our capabilities complete, the most important benefit that our clients share with us about our services is that we allow them to conduct electronic discovery while reducing their time, cost and risk. *Simply stated, we provide complete and completely affordable electronic discovery support that allows our clients to focus on the law, not the technology.*

To learn more about how Orange Legal Technologies can assist or augment your electronic discovery capabilities today, contact us at [info@orangelt.com](mailto:info@orangelt.com) or 1-801-328-4566 for an introductory briefing and demonstration of our electronic discovery services.
