

## **The DaVinci Inspiration**

To design a sexy, smokeless, on-the-go, portable vaporizer. Problem: Portability is essential, and large vaporizers with odorous fumes and attached bags are not desirable. Additionally, there are such a variety of herbs and essential oils that people want to vaporize, each requiring a specific temperature to produce vapor yet not produce smoke or carcinogens. Solution: After 4 prototypes, we've created the first battery operated, digitally temperature controlled, pocket-sized, truly mobile, smokeless and smell-less vaporizer. Now we're thrilled to be able to pour our creative energies into our new idea, the DaVinci Vaporizer.

Hello, My name is Cort Smith, and from my experience helping others bring their ideas to life, I've developed a keen sense of how new products can improve our daily lives. So the inventor/dreamer in me spoke up. I began to focus my efforts on a product that assisted not only people with regards to their mental health, but also a healthier lifestyle. Something slick and modern for the ancient practice of aromatherapy.

I began to sketch out the solution to a top quality and truly mobile and use-anywhere vaporizer. One that fits in any pocket. I also wanted to include the concepts of design, function, and excellence so that our consumer could identify with a product that is really well thought out.

In building this design, we concluded that a quality vaporizer had to have digital control over the vaporizing temperature. This is necessary because there are so many varieties of herbs and essential oils that require specific temperatures to reach vaporization without creating smoke or carcinogens.

So 4 generations later and a whole lot of input from friends and community – we've unveiled the world's most advanced pocket vaporizer.

### **The Pocket Vaporizer**

Other electric vapes are too big for a pocket and need to be carried in a purse or backpack, while others have to be plugged into the wall to work. That isn't convenient for someone travelling light and not carrying a bag.

## Precision Digital Temperature Control

The impetus behind the design of the DaVinci was to create a vaporizer that not only could fit into any pocket but also had digital temp control for a precision experience. The reason for digital temperature control is to allow the user to dial in the exact vaporization temperature without creating smoke, smells or carcinogens.

## Storage Compartment

The features that make the DaVinci a favorite begin with the internal storage compartment. Packed before leaving, the DaVinci carries an additional 3X load in storage for later use. And there's no better way to use it later as you can slip the DaVinci out from any small pocket and use immediately.

## Flexi-Straw

The DaVinci doesn't require assembly or use breakable straw pieces. Our flexi-straw is constructed of high-temp food grade silicon although some like to call it the walkie-talkie antenna.

## **Precision Temperature Control**

While the DaVinci is in your pocket, there is no worry of overheating because you need to activate 2 buttons with opposing motions to turn up the heat. The temp gauge can be read in Fahrenheit or Celsius depending on what school you come from and we didn't print the obvious On/Off lettering because this is your personal unit and once you've used it, you don't need an instruction graphic to take away from the James Bond look.

## **Snap Lid & Chamber**

There is no accidental opening of the lid or possibility of the contents spilling out cause we designed a latch to keep that from happening. When you want to give your material a stir or keep the chamber clean, just use the self-enclosed brush inside to do the job and put it back into its snug fitting.

## Ergonomic Grip

It's not likely you'll drop the DaVinci because great care was expressed to design an ergonomic grip but if you did, the internal components are secured to mil-spec standards and can handle the occasional party foul. The DaVinci may be used as a hand warmer since the little oven inside can be set to 430 degrees but it is better enjoyed on the chair lift with the aromatherapy it was intended for.
