Work Securely from Anywhere

In today's 24 x 7 x 365 world, employees need to be productive where ever they are. However, there are significant risks involved in connecting to the Internet with company or personal devices on networks outside the office. Employees need to make informed decisions about how and where they enter a password and access company confidential information.

Instead of relying on tedious videos or PowerPoint presentations that you hope make a lasting impression, Wombat's training modules have been shown to change user behavior. Wombat has applied their unique training methodology of interactive and engaging software-based training to the topic of working securely from anywhere.

Developed using learning science principles, Wombat's Security Beyond the Office will explain the risks and teach the basic concepts of working safely outside the office. Our training engages the user and helps them practically apply learned concepts during an interactive

training session that takes less than 10 minutes. When employees make a mistake, or answer correctly, they learn why — immediately — thereby reinforcing their learning and lengthening retention.

The Security Beyond the Office training module teaches employees how to use Wi-Fi securely, what not to do on public computers, how to protect company confidential information, and best practices for physically securing laptops and tablet computers while outside the office.

Security Beyond the Office Learning Objectives

- Understand how to use free Wi-Fi safely
- Learn the risks of using public computers
- Safeguard company equipment and information at home and on the road
