

COMPANY OVERVIEW

CREATING BETTER OUTCOMES FOR A BETTER TOMORROW

TransVoyant helps clients solve their most difficult challenges in global data intelligence environments through visionary and industry-leading solutions

TransVoyant gives people and organizations the real-time ability to visualize, track, process and make decisions based on vast amounts of location and temporal-based data sets, providing:

Commercial

- Field force and supply chain risk management
- Organizational policy enforcement
- Business intelligence

Defense

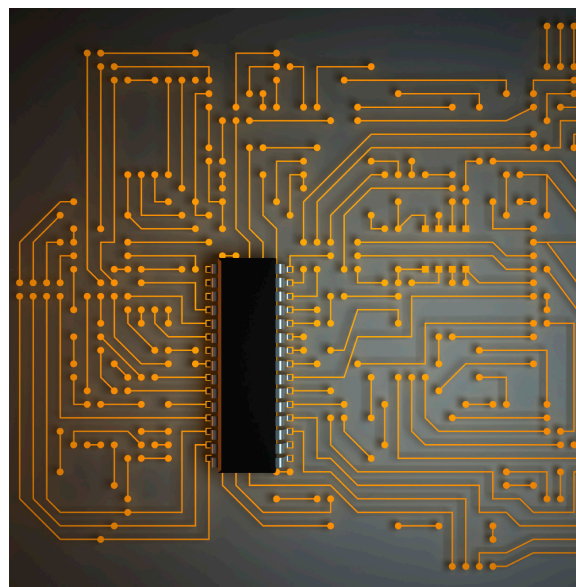

- Situational awareness
- Force protection
- Red and blue force tracking
- Asset and logistics tracking

Intelligence

- C4ISR
- Geospatial and multi-INT collection and analyzation
- Surveillance and threat detection

Public Safety

- National critical infrastructure protection
- Port and border security
- Emergency management
- Common operating picture

TURNING DATA INTO DECISIONS

TransVoyant solutions are used by business and government customers, providing them with control and enabling decisions using location, time, event and preference variables. Our solutions provide enhanced outcomes for compliance, risk management, intelligence and logistics support. Our data fusion tools, virtual intelligence and supply chain risk assessment programs help customers integrate and visualize both historical and emerging geospatial data in fluid and responsive experiences, allowing for smart and timely decisions.

SOLVING BIG DATA PROBLEMS

In a data-driven world, TransVoyant pushes to drive greater visibility and clarity to support smart data-based decisions. With a combination of agile tools, solutions and seasoned industry veterans, TransVoyant transforms customers' geospatial and IT logistics data into problem solving information. Regardless of the data situation, geospatial or systematic processes, TransVoyant solution engineers upgrade day-to-day operations into technology outputs that drive intelligent decisions, giving people and organizations the ability to respond quickly to changing conditions in their operating and risk environments.

RAISING EXPECTATIONS

TransVoyant offers our customers and strategic partners embeddable products, end user applications and subject matter expert consulting services. We employ a team of skilled consultants and developers with multiple levels of security clearances that assist clients in designing, implementing and managing TransVoyant solutions and providing outcomes-focused intelligence. Our tools are capable of processing tens of thousands of data points in mere seconds. They are dynamic, flexible, scalable, multi-modal, data agnostic and easily integrated into existing and new data architectures and applications.

"Digitized information about our physical world is now abundantly available—generated in even greater mass by UAVs and location-aware mobile devices. While that information can help drive decisions, in some cases, it's the correlation of one data set to other content that can deliver actionable information—leading to intelligent, decisive decisions."

ACCELERATING DECISION CYCLES AND OUTCOME EFFECTIVENESS

TransVoyant solutions make sense of and share vast amounts of global data to:

- Reduce the resources needed and increase the accuracy in the cycle to collect, analyze and disseminate real-time national security decisions
- Optimize government and commercial transportation routing and costs based upon real-time location, context and event information
- Link man, machine, location and time to produce a more efficient defense supply chain
- Increase demand for businesses by influencing buying behavior and consumer demand through the nexus of location, time, preference and demand attributes

SERVING CUSTOMERS WORLDWIDE

Our solutions are used by multiple transportation and supply chain enterprises, the U.S. intelligence and military communities, and leading systems integrators, including several Fortune 500 companies. By merging our abilities to combine multi-modal image and mapping resources overlaid with mission and business data, TransVoyant provides powerful decision making intelligence—in real-time.

Our solutions can be found flying through the air on Lockheed Martin aircraft, delivering

support to Command and Control Systems, automating Army depot asset management, tracking port security and drug interdiction activities by the United States Coast Guard and planning routing activities for commercial transportation carriers and airlines.

Representative customers include Boeing, SAIC, Northrop Grumman, General Dynamics, U.S. Marine Corps, National Reconnaissance Organization, U.S. Department of Homeland Security and Host Hotels & Resorts.
