OUR STATEMENT

At Trim Electric, we strive to give our residential and commercial customers unparalleled service and reliability by providing experienced, professional, licensed and insured electricians. Trim Electric has been serving Houston since 1978 and is still family owned & operated.

OUR EXPERTISE

We began our company as a residential service company and grew through the years by providing fair pricing, service, and follow-up that only a family run company could give. **Why have clients been coming to Trim Electric for 30+ years?** Because they can count on us. We work hard for our customers, building a reputation for integrity and quality since 1978. Times and technology have changed, but our focus on honest service hasn't. That's why repeat customers make up a substantial part of our business. As word of Trim Electric's quality and dependability spread, the scope of our operations widened into commercial services also. The Commercial services division has continued our dedication to unparalleled service and reliability.

TRIM ELECTRIC SOLAR INITIATIVE

The city of Houston is known as the “Energy Capital of the World” and our progressive city may one day be known as the “Solar Energy Capital of the World”. The City of Houston is committed to achieving a sustainable solar infrastructure through strategic partnerships that address market barriers for solar energy. The “Houston Solar Initiative” (the name of Houston’s Solar America Cities project) is dedicated to this long-term goal while focusing on near- and mid-term results that go beyond experimental solar projects.

Trim Electric has been progressive with its own Houston Solar Power initiative and has already begun cross-training its current employees with Solar / Photovoltaic installation training. We also have one of the few NABCEP certified installers in the City of Houston. The North American Board of Certified Energy Practitioners (NABCEP) is the “gold standard” for PV and solar thermal installation certification. Designed to raise industry standards and promote consumer confidence, NABCEP offers certification and certificate programs to renewable energy professionals throughout North America.

Trim Electric works primarily in the City of Houston, but will travel to anywhere in the state of Texas to install solar panels on residential or commercial buildings. To set-up an estimate or find out more about Houston Solar Power initiatives, please visit www.trimelectric.com

RECENT INSTALLATION: 10.34 kW PV System – Tomball, TX – Completed August 2011
