

Firestone SunWave™ SMRT

The Newest Development in Daylighting

Firestone

Satellite Technology that Saves Energy

Firestone Building Products is pleased to introduce the newest innovation in daylighting. Not only will this new system save energy costs, but it has been attributed to the increase of store traffic and sales and improved student performance in schools.

Firestone is committed to providing you with the latest developments in roofing and lighting with SunWave™ SMRT (Solar Motion Response Technology). SunWave SMRT uses mirrors and satellite technology to allow electrical lights to be shut off 70% of the day. Electricity also is saved through lower air conditioning costs, as SunWave SMRT gives off no heat and can save on energy costs for years to come. With SunWave SMRT, Firestone offers even a wider array of options as your single source roofing system.

For additional information, contact your local Firestone Sales Representative, or visit our website at firestonebpc.com/roofing/accessories/sunwaveSMRT/.

NOBODY COVERS YOU BETTER™

SunWave™ SMRT

Employing the SunWave SMRT system can reduce the electrical energy needed for lighting by 50-80% allowing buildings to operate strictly with daylight for up to 10.5 hours. With a 10-year manufacturer's warranty and a lifecycle tested up to 30 years, SunWave SMRT units can withstand winds of up to 105 MPH and weights of up to 1200 lbs dropped from six feet. In addition, the rain test revealed SunWave SMRT could withstand up to four inches of rain an hour in 70 MPH winds.

The GPS Technology in the SunWave SMRT system utilizes GPS technology and mirrors to track the sun to provide the maximum amount of light. The diffuser also produces light without shadows and blocks harmful ultraviolet rays. No electrical hook-up is necessary to provide the same amount of light as an 800-watt metal halide bulb while reducing energy costs.

Natural light provides a more productive work environment for professionals and students. Stores report increased sales and schools saw improved academic performance from students. SunWave SMRT is also eligible for energy saving tax credits on the federal, state and local levels.
