Sage 100 ERP Hosting Provider Gets Boost from Subscription Pricing

Myownasp.com re-launches Sage 100 ERP hosting program with new subscription pricing options, puts popular enterprise software in cloud-based SaaS environment for lower IT costs, easier maintenance.

ATLANTA, GEORGIA – MAY 22, 2012 — Myownasp.com, a division of Software Link and a Sage authorized Partner, has re-launched its popular hosting service for [Sage 100 ERP](#) (formerly “Sage ERP MAS 90 and 200”). The company updated its hosting program to complement new subscription pricing options recently announced by Sage. Together with subscription pricing, Myownasp.com is able to provide full-function Sage 100 ERP with access to the full-range of modules, including support for third-party applications, as a true cloud-based, Software-a-a-Service (SaaS) solution.

Stanley Kania, President and CEO at myownasp.com, points to the obvious cost advantages of cloud-based SaaS accounting software solutions in general, and Sage 100 ERP in particular. “For starters, there’s no additional hardware or software to buy, no complicated network infrastructure to support, and no implementation and network configuration hassles disrupting your daily work. On top of that, your in-house IT support requirements are reduced to practically nothing and ongoing cost of ownership is much lower.”

In the past, Sage 100 ERP customers had to purchase the software outright and then look for a provider to host the software. But with new subscription pricing options from Sage combined with the [Sage 100 ERP hosting](#) services by Myownasp.com, both existing and prospective customers can have a monthly pay-as-you-go, SaaS-based accounting software solution with automatic backups, behind the scenes software updates, built-in mobile access, and all the common benefits of running software in the cloud.

But not everything has to do with costs according to Kania. “Too many online accounting applications offer watered-down functionality, are restricted to high-level features, and are really only a good fit for very small companies. But with hosting from Myownasp.com, customers get the full range of modules and features that Sage 100 ERP offers including the ability to run and integrate with third-party applications.”

Kania points out that customers also have the option of taking Sage 100 ERP off the cloud server and can transition to an on-premise, local installation – as well as purchase the software outright - at any time.

Ultimately, Kania says, it’s about getting the most value out of [Sage 100 ERP](#). “The SaaS model provides affordable access to technologies that are transforming the way businesses of all sizes operate. Lower cost of ownership, up and running quickly, and access to the full range of functionality – that’s the Myownasp.com value proposition.”

Myownasp.com cloud-based hosting is available for all versions of Sage 100 ERP including Standard and Advanced and pricing starts at just \$115 per user per month.
