**FOR IMMEDIATE RELEASE**

## **Funamo Enables Safe Web for Android with All Leading Browsers**

*Many Android parental control solutions offer web filtering with their own proprietary browsers, which lack of features and usability of the mainstream browsers. Funamo's patent pending technology enables safe browsing with all leading browsers on the market.*

**Cupertino, CA, May 22nd, 2012** — Funamo provides the most comprehensive parental control for Android devices. Its patent-pending web-filtering technology supports all leading mobile browsers currently available on Android Market. Don't settle for a second-class browser just to get online safety. Now kids can enjoy their favorite browsers with the protection of Funamo.

The built-in Android browser is installed on every Android device and provides overall good experience. Recently there have been great innovations with a plethora of third-party browsers coming to the market. Each browser offers certain unique features and better usability. The most popular browsers on the market today based on the total number of downloads include Dolphin, Opera, Firefox, Skyfire, Maxthon, Boat, etc.

"The traditional parental control solutions use proprietary safe browsers to offer web content filtering." said Howard Li, Funamo's founder and CEO. "However building a good web browser is no simple task. Over time, we have seen safe browsers simply not keeping up with the innovations in the browser space. So people who want good web content filtering have to give up their favorite browsers.

"Our patent-pending web filtering technology was designed to work with all web browsers, including the built-in stock browser and all third party browsers such as Dolphin, Skyfire and Opera. After Funamo Parental Control is installed and configured on your device, inappropriate web content will be blocked and filtered out from search results no matter which browser you are using."

Funamo web filtering technology was designed from ground up specifically for mobile devices. It offers highly robust web filtering and safeSearch for major search engines such as Google, Yahoo, Bing, even Youtube videos. Users can add their own blacklist and whitelist as well.

Besides web filtering, Funamo also provides device monitoring and application control. All contacts, phone calls, SMS messages, websites visited, applications run and recent locations are automatically logged and uploaded to Funamo server. So parents can login from any web browser 24/7 to keep track of all the activities on the device. Application control allows parents to set a password and specify time slots for selected applications such as system settings and games. [Video tutorials](#) and [FAQs](#) can be found at Funamo's website.

Funamo Parental Control can be downloaded from Android Market (Google Play) for a free evaluation. <https://play.google.com/store/apps/details?id=funamo.funamo>

It can be purchased within the app for \$19.99 which protects the device for as long as the user owns it. No subscription, no hidden costs. Now for as little as the price of a book, parents can have peace of mind with their kids' mobile devices.

###

Funamo provides comprehensive parental control solution for Android-powered mobile devices with patent-pending web filtering, safe search, application protection/restriction and device monitoring.
