

NEW! THUNDERBOLT DOCKING STATION for **MACBOOK** and **ULTRABOOK**

Matrox® DS1™

Finally – the convenience and connectivity you’ve been looking for!

Today’s MacBooks and Ultrabooks are powerful enough for most corporate users but their limited connectivity make them inconvenient, and their small screens and keyboards make them uncomfortable to use in the office all day. The new Matrox DS1 docking station changes everything! It gives you the most from your Thunderbolt port by letting you add a large display, a full size keyboard, a mouse, a wired network, and many other peripherals using a single cable. In an instant, you enjoy all the productivity benefits of a desktop computer.

Create your ideal ergonomic workspace wherever you are – in the office, in the dorm, or at home.

One-Cable Convenience

Save time everyday — come and go without disconnecting and re-connecting all your devices. One Thunderbolt connection does it all. Tame the cables cluttering your desk and save wear-and-tear on your laptop.

Size Matters

Go beyond 13 inches. Enjoy the productivity benefits and superior comfort of an affordable full-size DVI or HDMI display.

Gigabit Ethernet for All

Matrox DS1 adds gigabit Ethernet access to laptops that do not have a built-in gigabit Ethernet port. Transfer data 18 times faster than WiFi and offload traffic from the corporate WiFi network.

SuperSpeed USB 3.0

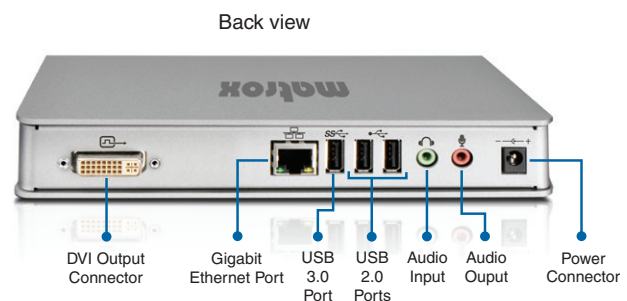

Matrox DS1 adds an easily accessible SuperSpeed USB 3.0 port to your system. Transfer data 10 times faster than standard USB 2.0.

Expand Your Connectivity

Two additional USB 2.0 ports let you connect anything else you need — full-size keyboard and mouse, printer, scanner, storage, smart phone, optical drive, camera, flash drive, and other peripherals. Audio input and output connections support microphones, speakers, and headsets.
