

CLINICAL STUDY MONT ECHO *RESULTS*

Mont Echo Naturels' 100% natural Sea Buckthorn facial care products receive extraordinary results in a recent clinical study.

The study was conducted by a leading personal care laboratory headquartered in France.

Participants in the study were asked to utilize the full Mont Echo line of Sea Buckthorn-based natural facial care products, including the Crème Cleanser, Moisturizer, Oil Serum, Soothing Mist, and Nutritive Powder Mask. Corneometry, professional examinations and photographic analysis were employed to clinically measure skin hydration levels, pigment appearance and other factors.

Highlights of the study results include:

Stunning increase in skin hydration: 96% of women stated that their skin appeared more hydrated after only 14 days (100% after 28 days), with an average measured increase of 71% over the course of the study.

Decrease in the total area of brown spots and hyper-pigmentation of up to 79%, an incredible achievement for a product line that uses no synthetic ingredients

87% reported significant reductions in the appearance of fine lines and 83% noticed a reduction in pore size

91% of women felt that their skin appeared more youthful; more than 90% felt their skin was smoother, more even and more radiant

100% of women tested reported that after just one month, their skin appeared softer and more supple

RESULT: Decrease in brown spots & hyperpigmentation*

RESULT: Smoother, more even skin*

**Untouched photos from clinical study, Day 0 to Day 56*
