Sage 500 ERP Hosting Service Re-launched With Subscription Pricing Option

Myownasp.com re-launches Sage 500 ERP hosting program with new subscription pricing options, putting ERP software for manufacturers and wholesale distributors in the cloud.

ATLANTA, GEORGIA – June 12, 2012 — Myownasp.com (<http://www.myownasp.com>), a division of Software Link and a Sage authorized Partner, has re-launched its popular hosting service for [Sage 500 ERP](#) (formerly “Sage ERP MAS 500”). The company updated its hosting program to complement new subscription pricing options recently announced by Sage. Together with subscription pricing, Myownasp.com is able to provide full-function Sage 500, including support for third-party applications, as a true cloud-based, Software-as-a-Service (SaaS) solution.

Stanley Kania, President and CEO at myownasp.com, says that Sage 500 hosting is a first for current and prospective customers of the popular ERP software. “Sage recently announced new subscription pricing options for Sage 500 ERP but does not currently offer a hosting option for the product. So we’re combining our long-standing hosting program with the new pay-as-you-go pricing model and think it’s a fantastic opportunity to provide a valuable service to companies looking to run Sage 500 in the cloud.”

Kania also points to the cost advantages and simplicity of [Sage 500 hosting](#). “There’s no additional hardware or software to buy, no complicated network infrastructure to support, and no implementation and network configuration hassles disrupting your daily work. On top of that, your in-house IT support requirements are significantly reduced and ongoing cost of ownership is much lower.”

Sage 500 is known for features and capabilities it delivers to the manufacturing and wholesale distribution industries which provides a nice fit for the Myownasp.com hosting program. Kania says, “Manufacturers and distributors tend to have complex operational processes and often run the business from multiple locations and warehouses. All of those factors make Sage 500 hosting an attractive proposition, providing easy access to the ERP system from anywhere and anytime to keep operations moving.”

In the past, Sage 500 ERP customers had to purchase the software outright and then look for a provider to host the software. But with new subscription pricing options from Sage combined with the Sage 500 hosting services by Myownasp.com, both existing and prospective customers can have a monthly pay-as-you-go, SaaS-based accounting software solution with automatic backups, behind the scenes software updates, built-in mobile access, and all the common benefits of running software in the cloud.

Kania points out that customers also have the option of taking Sage 500 ERP off the cloud server and can transition to an on-premise, local installation – as well as purchase the software outright - at any time.

Ultimately, Kania says, it's about getting the most value out of [Sage 500 ERP](#). "The SaaS model provides affordable access to technologies that are transforming the way businesses of all sizes operate. Lower cost of ownership, up and running quickly, and access to the full range of functionality – that's the Myownasp.com value proposition."

Myownasp.com cloud-based hosting is available for all versions and modules of Sage 500 ERP and pricing starts at just \$189 per user per month.
