Eleven Wireless Launches New ElevenOS Software

ElevenOS, hospitality's only guest Internet platform, adds groundbreaking functionality

6/22/2012

Portland, OR – Eleven Wireless announced major advancements to ElevenOS, the hospitality industry's only above property guest Internet platform that helps hotels maximize Internet revenue and deliver a compelling guest experience.

ElevenOS delivers a new framework for advanced bandwidth management including package tiering, in-session upgrades, sharing across multiple guest devices and easy provisioning and prioritization for groups and conferences. These new features allow hotels to address the dual challenge of meeting guests' growing demand for more bandwidth and their resistance to paying for basic Wi-Fi access.

Flexible Internet management functionality within ElevenOS allows hotels to provide guests with free or low-cost basic Internet for all or just loyalty guests, with options to select higher speed plans, during sign-up or within their session. Moreover, the new conference management tools allow hotel staff to sell Internet to groups and conferences with tailored offerings such as bandwidth caps and guarantees, concurrent user limits and more.

The ElevenOS content management features have been transformed into an online engagement platform where non-technical hotel staff can create and edit splash pages and other online content to better engage their guests and conference groups while maintaining brand standards. This platform provides hoteliers a way to connect with guests throughout their stay, as they spend more and more time online. With easy to use in place editing, non-technical hotel staff can easily create and continually update splash pages with relevant content. Hotel banquet staff can just as easily create special landing pages customized for groups and conferences. Templates and digital asset libraries allow hotels to deliver highly sophisticated, content rich portals that exceed guests increasingly sophisticated technology expectations.

"We are very excited about the launch of these major updates to ElevenOS", said Dan Meub, CEO of Eleven. "Several of our network partners have already used the advanced functionality to meet the most rigorous guest Internet standards of major brands like Marriott as well as boutiques and independents. Hoteliers also appreciate a cloud-based above property management platform that can deliver a consistent guest experience across multiple properties and service providers."

About Eleven Wireless

Eleven delivers hospitality's only guest Internet platform, providing a cloud-based solution for hotels and brands to deliver a consistent, compelling and unique guest experience to their guests, whether on guests' own mobile devices or hotel-provided computers in the lobby, business center and guest rooms. Founded in 2002 to deliver wireless Internet to hotels, Eleven has grown rapidly, expanding its cloud-based software platform, ElevenOS, to provide hoteliers a centralized way to manage all aspects of their evolving online guest experience. As the only service provider neutral platform, ElevenOS allows hotel management groups to standardize their Internet, business center and in-room guest experience even when they have an assortment of service providers. Eleven's solutions have been deployed in nearly a thousand hotels nationwide and that number continues to grow each month. Eleven is a privately owned company headquartered in Portland, OR.
