

caretaker cuts your energy usage by as much as 48%, equating to a saving of £50 per PC and reducing your carbon footprint by 141kg of CO₂ per device annually.

caretaker is Taiga Technologies' powerful energy management and monitoring tool, designed to regulate your IT systems, reducing energy wastage, CO₂ emissions, and energy costs.

caretaker intelligently delivers a range of benefits to organisations and users:

Reduced Costs

caretaker significantly reduces IT power costs across the network. Intelligent energy saving policies can be defined by department, user or computer.

Cloud Hosting

caretaker is the only power management software which can be hosted in the cloud, allowing you to access and manage **caretaker** anytime and anywhere, and further reducing your carbon footprint

Any device

Real-time measurements and management reports available on demand from all network-connected devices in the organisation, whether fixed or mobile. **caretaker**'s API allows *any* device, such as laptops, tablets and smartphones, to interface with and be energy-managed by your account.

Compliance

Employees are encouraged to work responsibly, and in accordance with the European Working Time Directive.

What our users say

"Achieving environmental sustainability is vital to the continued success of our business. With a ROI of less than 4 months, Taiga Technologies is helping us work towards this goal. caretaker has continued to surpass our expectations, delivering savings in excess of £58,000 and reducing our carbon footprint by over 250 tons of CO₂ in 2010."

Joyce Melvin, Aberdeen Asset Management

caretaker consists of :

smart on:

applies automated energy saving standby and shutdown policies to individual PCs or laptops on a network, day or night!

net able:

provides an effective and comprehensive toolset to further enhance your network management efficiency.

user wise:

delivers automated break scheduling and reporting, prompting users to take breaks in compliance with HSE recommendations

Taiga is the Russian word for the boreal forest extending from Europe to the Pacific, and into Canada. The *Taiga* can be said to serve as the lungs and air conditioner for the earth: the protection of the *Taiga* and its biodiversity is part of the mission of almost every environmental NGO worldwide.
