Online Backup Made Simple

As a business leader, you know the importance of keeping your data, financials, proposals, databases, and emails safe, secure and always available. Yet, the critical task of data backup can be expensive and challenging as your data continues to grow. You don't have time for backup solutions that take months to setup, require thousands in hardware capital, and require someone to oversee it all.

AltDrive, a trusted leader in managed online backup, saves time and money with a simple, secure, and inexpensive backup solution that allows you to focus on your business' future. You can be setup and running in no time since AltDrive gives you the flexibility to deploy and manage multi-user environments from the convenience of an administrative web console.

With AltDrive Biz, You are in Control

AltDrive Biz's web-based Administrator Portal allows you to:

- Create administrators and sub-accounts
- Reset account passwords
- Lock out and reset accounts
- Assign account encryption key hashes
- Create and assign backup sets
- View account usage
- Download the latest application software
- View and pay invoices

Through AltDrive Biz software, application users can:

- Restore files and folders from any backup snapshot
- See a history of all backups
- Configure options and set bandwidth throttling
- View the status of a backup or restore operation

AltDrive Biz Feature Set

Security

■ Encryption

- **AES:** All files are encrypted **before** leaving your computers en route to AltDrive. We use AES 256 bit CTR mode encryption with your personal key. Your personal key remains at your facility and under your control. The data is stored at AltDrive's world class data centers where it remains encrypted. The best supercomputers today would require hundreds of years to break the encryption, thus the endeavour is economically unfeasible.
- **SSL:** The encrypted control interaction with AltDrive uses 256-bit SSL - the same as what is used in the banking industry.

■ **Data Centers:** All data centers employ state-of-the-art security and are SAS-70 certified.

■ **Near-Continuous Data Protection:** AltDrive detects and backs up new and changed files and folders.

■ **Alerts:** Administrators can elect to receive email alerts regarding backup status and overall health.

Ease of Use

■ **Block-level incremental backups:** After the initial full backup, AltDrive only backs up new or changed portions of files, which saves bandwidth and ensures future backups are super fast.

■ **Bandwidth throttling:** Users can choose how much bandwidth they want to dedicate to their backups and restores so other high-priority services can run unimpeded.

■ **Instant Restore:** Unlike many backup services, restore operations occur as soon as the user clicks start. No waiting minutes or hours for the restore data to be built.

Platform and File Support

■ **Version (snapshot) support:** Restore any version of a backed up file up to 7 years in the past.

■ **SQL, Exchange and network drive support:** AltDrive backs up common business applications running on Windows, Linux, Solaris, and Mac OSX servers.

■ **Windows, Mac, Linux and Solaris support:** AltDrive Biz works on Windows (2000, XP, 2003, Vista and 7, including servers), Mac OSX (10.4, 10.5, 10.6, desktop and server), Linux (2.4 and 2.6 kernel such as RHEL4, RHEL5, Debian, Ubuntu, etc.), and Solaris. Both x86 and x86_64 architectures are natively supported. Android Mobile OS support coming soon.

■ **Open and locked file support:** AltDrive Biz backs up all open and locked files, including Outlook PST files on Windows platforms.
