A&I Security Group Expertise

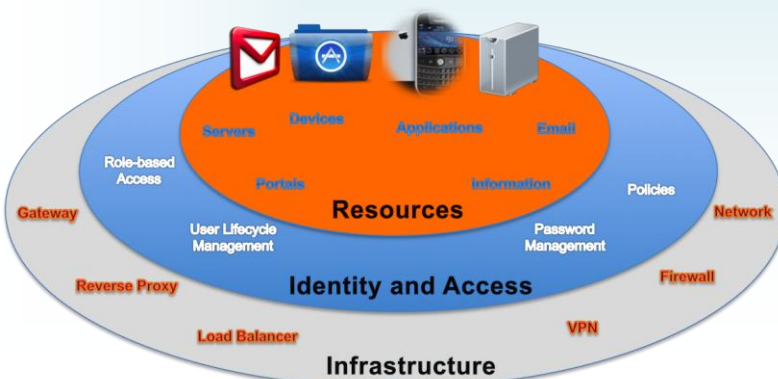

Our Team will work in collaboration with you to determine the current state functionality and accordingly provide elegant solutions to improve security within the organization. We, in partnership with you, will define a foundational framework that helps layout security guidelines for infrastructure, resource protection, user lifecycle management and user password management.

The team will apply best in class standards in defining, designing and implementing the appropriate middleware solution that is cost-effective, highly available, fault-tolerant and scalable that meets the business needs. We will work with you to deploy solutions, specifically technologies that manage the integration of identity data from multiple authoritative sources, user authentication and authorization, user account provisioning and de-provisioning, and roles definition and assignment. Also, we have expertise in privileged user access to resources like applications, servers & devices, externalized authentication through federation, and delegated administration of these functions.

We value the security of your data, so we will work with you to ensure tiered levels of access depending on the criticality of the application. The team will leverage their deep field experience to ensure systems are scalable to a large user volume. We execute appropriate security controls to prevent malicious intrusion.

The team will also work with you to define an approach for ongoing process support post implementation. Our technical expertise and extensive experience will help reach your organizations desired state of maturity. The team will leverage your existing methodologies, wherever possible, to provide the project leadership functional and technical expertise for the successful implementation of the desired solution.
