WWW.FASTTRACKSCRIPT.COM

Examples of what you can do with FastTrack

Zero-touch Windows deployments

Use WDS to deploy Windows and add custom tasks to avoid the need for post- deployment modifications. Read more

Backup and replication scripts

Save the cost of a backup solution. Set up client or server backups or replication with a single script line. Read more

Cloud-based inventory and logging

Inventory computers and log events with a single script command. No internal infrastructure and no extra cost for additional software. Access your private cloud from a PC, iPad or mobile device. Read more

Logon scripts

Take logon scripts to the next level with graphical user interfaces and extended functionality. Read more

VPN logon scripts

Get custom logon scripts executed when laptops establish a VPN connection. Read more

Deploy client software unattended

Automate client software installations or compile them into .exe files with credentials for offline computers. Read more

Active Directory scripting

Build your own locked-down Help Desk application or automate creation of objects. Read more

Build your own custom Kiosk computers

Use the exe and msi compilation features to build locked down kiosk computers. More info

Deploy applications to server farms

Deploy Terminal Services RemoteApps or Citrix farm applications through centralized scripts. Read more

Create GPO or SCCM distributable MSI files

Convert non-MSI based setup programs into MSI files without using snapshots - or build your own MSI file. Read more

Build richer SCCM task sequences

Exchange task sequence variables on the fly and get easy access to SCCM logging from your scripts. Read more

XenApp and Remote Desktop Services session control

Access client information from the server side and create sessions from the client side. ICA version RDP version

Key Technical Advantages

- ✔ Create smaller and simpler scripts that do more.

- ✔ Cut training and Consultant costs.

- ✔ No Client deployment – no need to install run-time support on clients.

- ✔ Secure scripting – All passwords are automatically encrypted and scripts can be encrypted with your own private key.

- ✔ Optimized for larger networks.

- ✔ Interactive scripts – include pre-built graphical user interfaces in your scripts – no graphics skills required.

- ✔ Rapid Script Editor – Powerful visual studio-like script editor with Syntax highlighting and code completion.

- ✔ Extensive features – more than 900 built-in Commands, Functions, Conditions & Collections.

- ✔ Extensive documentation and tutorial videos.

- ✔ One tool to accomplish many different network administration tasks.

- ✔ Windows 7 and 8 compatible – Fully compatible with all versions officially supported by Microsoft – and Windows 8.
