

EnviR

The SmartR Monitor

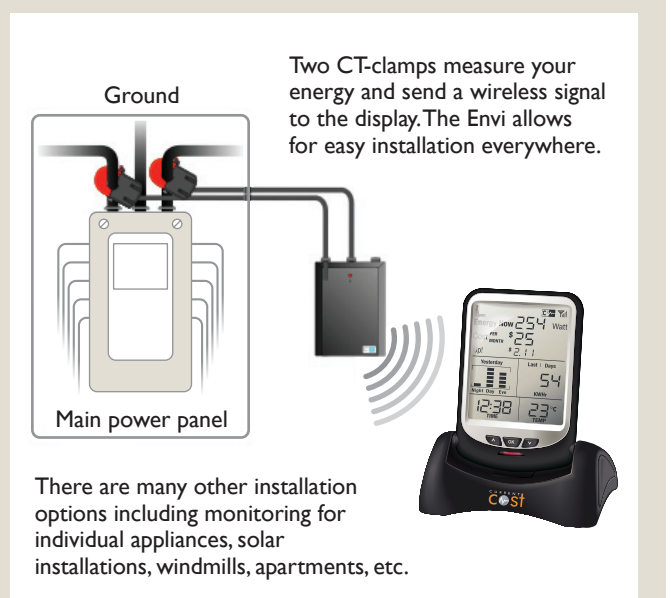

Take control of your energy use with the Envi-R Wireless Energy Monitor

- Monitor real time power use
- Works independent of utility meter
- Monitor energy use per day/month
- Track energy use anywhere – anytime
- Wireless transmission up to 100'
- Monitor Kwh used daily, last 7 days, last 30 day
- Data output every 6 seconds
- 7 year historical memory
- Monitors time and indoor temperature
- Available for single or 3 phase electrical service
- Capable of tracking up to 10 total power sources
- Various software options available

How the system works

The EnviR's wireless system is designed to install quickly and give the user years of reliable and trouble free real time information.

1. Two CT clamps surround electric cables. They sense energy levels through measurement of the magnetic field surrounding the wire. This magnetic field varies with the amount of power used.
2. The CT clamps connect to a transmitter that sends a wireless signal to the display
3. One display that receives the wireless signal. It displays, stores and can send the data to a PC or Internet
