

Pre-Built Supply Chain Analytics for SAP Customers

Overview

FusionOps delivers pre-built and pre-tested supply chain dashboards and reports for SAP customers. Business users obtain on-demand visibility into a full range of supply chain functions, with a suite of “best-practice” metrics, plus easy-to-use, self-service fine tuning to adjust to company-specific requirements – all within a single day of engaging with FusionOps. Analytics are run in the cloud, eliminating initial and ongoing infrastructure and software tool expenses, allowing FusionOps to offer its solutions for an affordable monthly fee.

Why FusionOps?

Manufacturing companies using SAP ERP systems have a massive accumulation of data supporting their supply chain activities. Historically, turning all of this data into actionable information has been a daunting task, managed by over-worked IT departments.

FusionOps has leveraged its deep technical expertise in SAP and supply chain product development, to create a patented, cloud-based, multi-tenant solution, that delivers hundreds of best-practice dashboards and reports, specifically formulated for supply chain business users.

FusionOps enables visibility into supply chain performance within hours of signup. No software, hardware, IT infrastructure investments or professional services are required to deploy or maintain FusionOps. Manufacturing companies get the visibility they need to reduce costs, mitigate risks, optimize working capital and gain competitive advantage immediately, not months later.

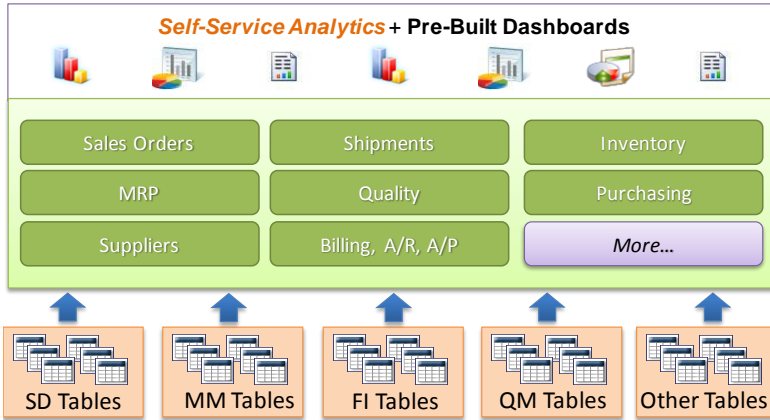

Key Features and Benefits

- *Immediate Visibility* – A complete picture of supply chain operations in less than 24 hours
- *Relevant Information* – Hundreds of pre-built best-practice supply chain analytics
- *Easy Self-Service Fine Tuning* – Modifying the library of analytics is intuitive and requires little or no IT support
- *No Infrastructure or Up-Front Costs* – FusionOps is a cloud-based SaaS solution, hosted remotely and securely; no hardware, software or coding required
- *Root-Cause Analysis* – Patented pre-defined navigation maps enable fast discovery of problems and their causes
- *SAP Plus Additional Data Sources* – Analytics on SAP data is available within a day; other data sources can be merged in just a few days
- *Share Metrics Seamlessly* – Publish analytics, share and collaborate with co-workers
- *Free 30 Day Trial* – Try FusionOps with no obligation for 30 days

Pre-Built Dashboards - Immediate Visibility into the Supply Chain

FusionOps automatically extracts and translates complex SAP table structures into best-practice dashboards and self-service analytics. Business users get immediate access to hundreds of pre-built dashboard reports for the supply chain, without burdening IT.

Pre-Built Best Practice Dashboards and Self-Service Analytics for the Entire Supply Chain

- Shipments
- Production Planning
- Inventory
- Purchasing
- Supplier Performance
- Billing, A/R, A/P
- Quality
- MRP
- Sales Orders
- BOM (Bill of Materials)
- And more...

Self-Service Analytics – Configure Dashboards in Minutes

Use FusionOps' pre-built analytics as a template; then fine-tune for your specific requirements, or create new analytics from scratch. FusionOps makes it easy to slice and dice information, uncover the root cause of performance issues, and create new dashboards and reports without IT help.
