Updated Oxygen Forensic Suite 2012 Helps Solve Gang Offences, Analyzes Interactions among Multiple Mobile Users

Oxygen Software updates Oxygen Forensic Suite 2012, the company's flagship mobile forensic tool, offering investigators the ability to analyze interactions among users of multiple seized mobile phones. The new feature builds and displays a Communication Statistics diagram with a chart for multiple devices, clearly visualizing connections between the phones' users. Oxygen Forensic Suite 2012 analyzes information obtained from phones' address books, call logs, applications and messages. By discovering and displaying matching records, Oxygen Forensic Suite 2012 provides investigators with at-a-glance view of various interactions among the users of different mobile devices, helping forensic specialists to discover connections between the users in just a few clicks.

In addition, the latest release of Oxygen Forensic Suite 2012 introduces support for two popular Russian social networks, VKontakte and Odnoklassniki. By accessing account details for the two social networks, Oxygen Forensic Suite 2012 offers forensic specialists access to user messages, friends lists, chats, connections, communications, geo data, uploaded pictures and other information shared in VKontakte and Odnoklassniki.

Investigating Gang Offences with Enhanced Communication Statistics

Oxygen Forensic Suite 2012 enhances the Communication Statistics section with the addition of a new feature allowing investigators to analyze interactions occurring among users of multiple mobile devices. The new feature matches records extracted from devices' phone and address books, building a visual chart displaying who contacted whom, when, and how often. The enhanced Communication Statistics allows investigators quickly review suspects' communications with users of other mobile devices, discovering hidden connections and visualizing communications among groups of suspects.

"The ability to analyze all things in common across multiple devices was one of the most highly demanded by our customers", says Oleg Fedorov, Oxygen Software CEO. "We're now able to clearly visualize communications, shared contacts, social connections and other interactions among users of multiple mobile devices, allowing forensic specialists investigate criminal activities performed by organized groups".

Communication Statistics is available in the Analyst edition, and works for all supported phone models. Oxygen Forensic Suite 2012 obtains information about user interactions from multiple sources, including phone and address books, call logs, messages, as well as connections and communications occurring in numerous built-in and third-party apps.

New Social Networks

The latest release of Oxygen Forensic Suite 2012 adds support for two major Russian social networks, VKontakte and Odnoklassniki. Crime has no borders; these social networks are popular throughout the world, storing valuable personal information, bios, connections and interactions among its members. The updated Oxygen Forensic Suite 2012 can now gather information from these social networks, obtaining messages, friends' lists, chat logs, connections, communications, geo data and other information available in user accounts.

About Oxygen Forensic Suite 2012

Oxygen Forensic Suite 2012 helps investigators and forensic specialists access and analyze data from a variety of mobile devices such as cell phones, smartphones, communicators, PDA and tablet PCs. Currently supporting more than 5,200 different models, Oxygen Forensic Suite 2012 covers the widest range of mobile devices compared to competition, and allows fully automated acquisition and analysis of supported devices.

The unique Timeline feature offers convenient, single-place access to all activities and movements performed by the user arranged by date and time. Investigators can track user location at every moment, build and map their historic routes, and clearly see all activities performed by the user at each location.

Another signature feature of Oxygen Forensic Suite allows investigators performing a global search on all devices ever analyzed with the toolkit. The global search quickly reveals any connections (e.g. common contacts, exchanged calls, texts or emails) between the phone owners.

Oxygen's statistical analysis tools allow investigators discover social connections between the users of multiple mobile devices. Calls, text messages and Skype conversations are analyzed to produce charts and tables revealing the users' closest circle at a glance.

Oxygen Forensic Suite 2012 guarantees zero-footprint operation, leaving no traces and making no modifications to the content of the devices, making it the tool of choice among government and law enforcement agencies, security services and forensic organizations in more than fifty countries.

About Oxygen Software

Founded in 2000, Oxygen Software offers the most advanced forensic data examination tools for smartphones and mobile devices. The company is dedicated in delivering the most universal forensic solution covering the widest range of mobile devices running Symbian, Windows Mobile, Blackberry, iOS, and Android operating systems. As a result, Oxygen Forensic Suite receives great response at forensic conferences, exhibitions and trainings, and occupies a spot in the top of the list in relevant tests for extracting more data than competition.
