Early Cataracts Symptoms

Have you recently noticed any changes while driving at night or reading? You may have early cataracts if you are experiencing any of the symptoms listed below.

- Difficulty seeing up close
- Difficulty reading
- Colors seem yellowish
- Sensitivity to light such as halo or glare
- Difficulty seeing at night
- Double vision in one eye
- Need a brighter light to read
- Vision is blurry

Cataract Vision Correction Surgery

Cataract surgery is the safest, most commonly performed procedure in the US. Cataract surgery (which is generally covered by insurance) allows us to improve your up close and distance vision without glasses by using Intraocular lenses like Crystalens. A cataract is a clouding of the normally clear lens of the eye. It can be compared to a window that is frosted or yellowed. Your vision can improve dramatically after cataract surgery. Dr. Shofner, Nashville's top cataract surgeon, has performed more than 10,000 cataract surgeries. Do you have a vision impairment and over 50 years. Read More about Cataract Vision Correction Surgery Nashville on Shofner Vision Center's Website.
