## VersaTest Certifier

"Taking out the pain and putting in the pay in certification."

## VersaTest Certifier

VersaTest Certifier is a powerful tool for building true collaborative testing environments with your merchants, VAR's, or other certification partners. Certifier is designed specifically for financial institutions engaged in certifying members to a switch or transaction network.

## VersaTest Certifier Streamlines the Certification Process

Using powerful testing automation technologies from Ascert, Certifier solves many of the pain points that are common in the certification process. Users of the product have reported up to 50% time saving equaling less money spent and more increased revenues by delivering product faster to the market and to your customers.

Certifier creates a common testing interface allowing analysts on both sides an easy to use graphical interface, push button test execution, and an automated error identification reporting mechanism. The system can support thousands of internal and external users simultaneously. Ascert's patent pending Cert-T technology acts like a traffic cop, making sure users, data, and testing environments are quickly and safely connected. Multiple-level security authentication and flexible user interface ensures that you have full control of user access and data views.

## Advantages of VersaTest Certifier

VersaTest Certifier solves many of the major challenges in the certification process. Just dealing with one or two of the top issues can show a very rapid return on investment.

- Patent pending technology and secure authentication ensure data privacy.
- Distributed testing environments allows for controlled customer collaboration.
- Significant time savings via automated error identification and reporting
- Faster, easier, and more reliable certification testing.
