Fund Raising through Gospel Heroes

Using the medium of Gospel Music channelled through events such as Gospel Heroes Showcase, we want to help as many under privileged children as possible especially in developing countries where population growth is very high and resources are stretched to the limit.

We want to help the younger generation of developed countries to have a real purpose in life providing them positive messages through accessible music and provide them with opportunities to give back to society by way of participating in Gospel Heroes events and projects.

Simply coming to watch any of the events or buying music recorded by our artists will give support to helping those less well off in the world.

We say **"Everyone can be a Gospel Hero"** and this is achieved by anyone involved with Gospel Heroes whether participating as audience members, purchasing music, supporting us as sponsors, working with us as production and event organisation staff, contestant acts, and music industry artists and executives who give their time and effort.

One of the best ways to help the children is putting Primary Care resources directly on their doorstep to help treat diseases as quickly as possible, provide regular health checks and deliver inoculation programmes.

Healthcare education of women is very important to help them with their own health as well as their children.

This is part of primary healthcare that can be delivered using mobile clinics.

The medical facilities provided can assist the mother from pregnancy right through to birth and looking after young children. Ultimately this will improve maternal and child survival rates.

The United Nation's Millennium Development Goals (MDGs) devised in 2000 has a 15 year target are:-

1. End Poverty and Hunger
2. Universal Education
3. Gender Equality
4. Child Health
5. Maternal Health
6. Combat HIV/AIDS, Malaria and Other Diseases
7. Environmental Sustainability
8. Global Partnership

Gospel Heroes charity work aims to cover MDGs 4, 5 and 6 through donations and direct action in provision of mobile care units designated for primary health care.
