## **Entrada Announces Corporate Partnership with Allscripts, Including Acceptance into the Allscripts Developer Program and Application Store & Exchange**

### **ENTRADA INTEGRATES FURTHER WITH ALLSCRIPTS, PROVIDING A DEEPER LEVEL OF WORKFLOW INTEGRATION AND MOBILE CAPABILITIES TO CLIENTS USING THE ALLSCRIPTS PROFESSIONAL OR ENTERPRISE EHR SYSTEMS**

NASHVILLE, Tenn., August 9, 2012 – [Entrada](#) and [Allscripts](#) have expanded its official corporate partnership, further integrating Entrada’s clinical documentation and information sharing technology with the Allscripts Professional and Enterprise EHR systems. Entrada’s mobile application is now live on the Allscripts Application Store (ASX), an online marketplace accessible by Allscripts hospital and physician clients and partners, allowing them to create, add, and connect to third-party applications. This new partnership also enables both companies to co-market the integrated solution to Allscripts’ current and future client base.

With inclusion into the App Store, Allscripts’ clients now have another integrated workflow solution designed to protect physician productivity before, during and after the transition to the Allscripts Professional and Enterprise systems. Entrada’s technology empowers physician practices, hospitals, and other acute care organizations using Allscripts to improve documentation efficiency and accelerate chart completion through voice, mobility, and automation delivered by Entrada’s mobile application.

Entrada provides a solution for every workflow, whether in single or multi-specialty environments. Entrada’s fully-integrated mobile solution syncs with the Allscripts Practice Management System to build a daily worklist. A physician then simply dictates a note, and Entrada automates the text conversion and editing and inserts the finished note back into individual text fields within either of the Allscripts EHR platforms.

Entrada has also introduced [Real-Time Speech-to-Text](#) to quickly populate text within Allscripts for physicians who wish to self-edit. Unlike traditional voice-rec solutions, Entrada’s cloud-based engine is accessed through a simple web app, ensuring a quick and painless installation. Also, voice profiles are hosted in the cloud, not on the device. Entrada can deploy each physician’s unique voice profile to any Allscripts solution at any location, enabling continuous improvement and consistent recognition quality in all care settings.

“We believe that by obsessively focusing on workflow, organizations can embrace a digital health strategy that increases productivity, improves accuracy and reduces administrative costs,” stated [Bill Brown](#), CEO of Entrada. “With this official partnership, Entrada can now provide Allscripts clients with a level of mobility and flexibility currently unmatched in the healthcare technology industry.”

### **About Entrada**

---

Entrada is a healthcare technology company who provides a documentation workflow solution that protects physician productivity and revenue by enabling physicians to continue dictating before, during and after the migration to an EHR. Entrada's cross-platform solution, available for Apple iOS, Windows Mobile and PC platforms, provides a fast, easy way to document clinical information and makes EHRs much easier to adopt and use. Entrada's solution enables the capture of the narrative portions of the note, woven alongside structured data, to support chart completion.
