Anatomy and Physiology

Mastering the Fundamentals of Anatomy and Physiology

Healthcare experts agree one of the most critical skills for coders and billing staff today is a strong understanding of anatomy and physiology. Due to the increased clinical nature of these positions, this becomes an even more important element of the staff education you provide.

Discover BridgeFront's Anatomy and Physiology online education series. These 16-courses covers all major body systems, guiding your staff to better coding and documentation improvement. Written and maintained by national experts, these online courses blend interactive exercises, self-checks and engaging material into one easy to consume educational experience.

What your employees will experience:

Courses are available online, anytime and anywhere. A personal login allows employees to access courses that you assign, with the due dates you set for them. Easy to navigate, courses can be started and stopped any number of times, with virtual bookmarking taking them to where they left off in the previous session. As an administrator you can monitor student progress at anytime, running reports on test scores and more.

Course features and benefits:

- Anatomy of human body systems are broken into logical groups
- Illustrations and explanations support the learning process
- Common illnesses and diseases are looked at in detail
- Curriculum includes highlighting the new ICD-10 codes
- Practice exercises and exams allow management monitoring and reporting
- Maps to the chapters within the ICD-10 manual and breaks down each body system

What's different about our online education?

There is nothing more important than ensuring your employees have the right skills and expertise. Trust BridgeFront, leaders in online education, to guide your staff in mastering Anatomy and Physiology. Over 10,000 organizations over the past 10 years have chosen BridgeFront for its leading healthcare education.

This curriculum is valuable for both new hire on-boarding and existing employee improvement; it's also proven to reduce coding errors and increase proficiency. The courses provide:

- Role-based education, focusing on exactly what billers and coders need to know
- Combination of illustrations and easy to follow text engages employees, improving learning
- Common documentation concerns are addressed, based on real life encounters
- Can be taken in a series or individually
- Subject matter experts, HCPro, ensure content is accurate and up-to-date

Audience for this education:

The 16-course curriculum has been developed for inpatient, outpatient, and professional services coders, as well as CDI specialists and medical billing staff.

Certification & credentialing:

- 16 online courses are available
- Certified by AHIMA, 28.5 CEUs
- Certified by AAPC, 57 CEUs
