

# The Safe and Effective Alternative to Chlorine & Salt Treated Pools!

## SWIMMING POOL BIO SANITIZER

Save Money,  
Healthy Pool,  
Healthy You!

Go Chemless has pioneered the use of multiple base elements and measured multi-electrode electrolysis to achieve the industry's first bio sanitizer with set it and forget it intelligence.

The Go Chemless 138MS is a revolutionary device that uses green technology and modern computing power to keep your pool virus, fungus, bacteria and algae free without all the harmful chemicals. The 138MS was designed and built by a team of experienced engineers and organic chemists at Go Chemless.

End your Swimming Pool's Harmful Addiction to Chlorine & Salt!

### How does it work?

The Go Chemless micro-processor computer works by delivering a precise amount of elemental ions into your pool water to prevent algae, bacteria, viruses, mold and fungus from taking over your swimming pool. Unlike chlorine, which breaks down very quickly, the Go Chemless ions are available for bio sanitization over and over again.

Go Chemless has developed a method to use precious base metals to generate  $\text{Cu}^{+2}$  and  $\text{Ag}^+$  ions that are responsible for the bio sanitizing process.

### What is an ion?

Ions are charged particles that exist naturally in our environment. In fact many ions are absolutely necessary to support life including human life! The best example is table salt (sodium chloride,  $\text{NaCl}$ ) which is made from one ion of sodium ( $\text{Na}^+$ ) and one ion of chloride ( $\text{Cl}^-$ ). Without ions like sodium ( $\text{Na}^+$ ), Potassium ( $\text{K}^+$ ) and Calcium ( $\text{Ca}^{+2}$ ) your heart would not be able to beat because it's the ionic action between these three main electrolytes that make your heart contract and relax millions of times in your life.

The Safe and Effective Alternative to Chlorine & Salt Treated Pools!

# Simple, Effective & Safer than Chlorine or Salt!

## Benefits of the Go Chemless Swimming Pool Bio Sanitizer:

- **Combats: Algae, Bacteria, Viruses, Mold and Fungus**
- **Environmentally Friendly**
- **Reduced Exposure to Cancer Causing Organo-Chlorine Agents** 
- **Low Maintenance Automatic System**
- **Saves Money - No Expensive Chemicals to Buy**
- **No More Itchy Eyes, Dry Skin or Damaged Hair**
- **No More Chlorine Smell or Taste**
- **Safer for Pets and the Whole Family**
- **Lower Cost of Maintenance on Your Circulation System**
- **No More Worn, Faded Bathing Suits**
- **No More Spilled Chlorine in the Trunk of Your Car or on Your Clothes**
- **No More Muriatic Acid or Caustic Chemicals**

**Your Pool Stays Balanced!**

**Your Pool Stays Healthier!**

**YOU Stay Healthier!**

### CONTENTS:

Control Unit,  
Sanitization Chamber,  
Adapters, 12 Volt UL  
Power Supply with  
110v and 220v  
Adapters, Screws,  
Drill Bit, Test Strips,  
Installation and  
Operation Manual

## Easy to Install & Operate

Installation only takes few minutes.

It is simple as **1-2-3!**

1. Make two (2) cuts into your existing pool's PVC pipe.

2. Glue in the Sanitization Chamber.

3. Mount and plug in the Control Unit into a 110v or 220v power source.

Step-by-step online videos are available for viewing.

### FACTS:

This method of bio sanitizing water was originally developed by NASA® for the manned space and moon missions.

Trihalomethanes (THMs) are a family of very dangerous and hazardous chemicals found in Chlorine, which are collectively suspected to cause cancer. THMs are absorbed through your skin and are known to cause asthma. THMs are also linked to bladder and colon cancer as well as being linked to reproductive issues and birth defects.

Saltwater Pools are **NOT** Chlorine free pools! Many pool owners are under the misconception that if they have a Saltwater Pool that they have no Chlorine in their pool. Quite the opposite, a Saltwater Pool contains exactly the same Chlorine as a traditional pool. Instead of adding Chlorine directly to your pool, you add Salt (NaCl) that is transformed into pool Chlorine by the pool's Saltwater Generator. It also creates Sodium Hydroxide (NaOH), which is an industrial used caustic material that requires constant monitoring and adjusting of your pools pH. Saltwater Pools are also bad for the environment and have been **banned** in certain areas of the country. Saltwater is corrosive and can deteriorate your pools finish and cause corrosion to pool ladders and pool pumps.

The Centers for Disease Control and Prevention (CDC) in a federal study, reported that there are an average of 4,700 cases of injury and illness caused by swimming pool chemicals in the United States reported annually. Don't be another statistic!
