EntropySoft

EntropySoft Content Hub Enterprise Edition

EntropySoft Content Hub™ Enterprise Edition is enterprise-class content integration software with the most advanced content integration and process automation features, as well as SharePoint and Cloud integration capabilities. Content Hub delivers centralized access to all document repositories whether on-site or in the cloud. Built on 40+ Content Connectors™, this powerful software federates all an organization's content silos into one virtual repository shared by all applications. The Enterprise Edition also enables creation and management of advanced document processes through the powerful, yet easy to use Content ETL Studio™.

Highlights

- Two-way connection with content repositories provides users powerful search options and a seamless, real-time ECM experience
- Connect your employees, customers and business partners with what matters through SharePoint and the cloud
- Plan, organize, manage and control the most complex content processes for increased productivity, agility and compliance
- Drive increased productivity across your entire information management system with improved ECM system utilization, increased flexibility and reduced costs

Features & Benefits

Single Point of Access

40+ Connectors	➤ Easily connect all your unstructured content to enterprise applications with bi-directional connectors that redefine interoperability
Broad API Choices	➤ Web Services, CMIS (SOAP and REST), Java, Java Remote and .Net interfaces
CMIS Ready	➤ Future-proof your investment in content integration with the only cross-vendor implementation of ECM interoperability standard, CMIS

Cloud And SharePoint Integration

SharePoint as single point of access	➤ Content Hub SharePoint Web Parts provide full access to external documents in 40+ content-centric apps; create new docs, check in/check out, add metadata and set permissions
Connect employees, customers, and business partners	➤ Whether on premises or in the cloud, users can dynamically access and use all the data in your SharePoint implementation
Publish & sync with the cloud	➤ Pre-built, pre-tested content process templates for publish and sync accelerate integration projects with the cloud - Box, Office 365, and GoogleDocs

Search & Act on Everything

Dynamically connect to and optimize disparate content	➤ Connections to SharePoint and other ECM systems are bi-directional so your content can be searched, collaborated on, updated, synchronized, migrated or archived across systems
Brokered Search Option	➤ Content Hub acts as search broker to return real-time results in a single unified set leveraging existing repository search indexes
FAST and GSA integration	➤ Content Hub is the central point of connectivity for enterprise class search engines like FAST and Google Search Appliance to crawl external content

Features & Benefits   continued

Enterprise-Class Content Process Management

Advanced process features	➤ Built-in Content ETL Studio™ for advanced features to meet specific requirements, and provide sophisticated analysis and reporting
Customizable process templates	➤ Out-of-the-box process templates can be customized or extended using Content ETL Studio's vast feature set with more than 100 pre-defined tasks
Visual debugging to trace processes stage by stage	➤ Dynamically access documents and analyze metadata, permissions and the result at any stage; set breakpoints, step-over or step into tasks

Maximize Utilization and Reduce Costs

Powerful, efficient software platform	➤ Improve utilization and eliminate ongoing maintenance, development and services costs associated with content silo sprawl
Avoid 'home-grown' solution problems	➤ Specialized connector expertise quickly and easily solves interoperability and integration challenges
Choice of implementation	➤ Deploy as a ready to run Virtual appliance or install as pure software in minutes in an application server like WebSphere or WebLogic
Tight integration with Microsoft products	➤ Integrated with Windows Explorer, Office and Office 356
Mission-critical deployment	➤ Clustering, fault tolerance, and fail-over

Technical Specifications

SharePoint Platform Support

- **SharePoint 2010**
- **MOSS 2007**
- **Windows SharePoint Services 3.0**
- **SharePoint Portal Server 2003**
- **Windows SharePoint Services 2.0**

SharePoint Installation Requirements

- **Server Agent Install for required for read-write Connector, WebParts**
- **SharePoint Secure Store Service & SharePoint 2010 Search Connector Framework required for FAST Search Integration.**

EntropySoft Content Hub Virtual Appliance

The Content Hub Appliance is available in the following formats:

- **VMware ESX server image (OVF 0.9, VMX), requires ESX/ESXi server version 4.0 or later**
- **VMware image (VMX), requires VMware Player version 3.0 or later/VMware Workstation version 6.5 or later (32-bit and 64-bit Windows and Linux)**
- **Installable DVD**

Content Hub Appliance Technical Requirements (minimums)

- **Intel x86 Architecture 64bit—1 virtual CPU**
- **2GB Memory**
- **20 GB Disk**

EntropySoft SharePoint Edition supports more than 40 external systems for search, access, and content process automation including:

- **SharePoint**
- **Documentum**
- **FileNet P8**
- **Livelink**
- **Box**
- **And more**
