Digiscribe Saves Cardiologist $180,000 Annually with Document Scanning

Elmsford, New York – August 28, 2012 – Digiscribe International, provider of medical record scanning services, document management solutions and workflow automation software throughout the New York Metro area today announces that they have saved a New York cardiologist group approximately $180,000 annually by scanning over one million medical files. These digitized patient records are now available electronically so that each physician can access patient history quickly and easily without having to search through paper medical files.

This cardiologist practice consists of multiple doctors in New York City. Like many other medical offices, they were awash with paper in the form of patient charts and medical records. This information was stored in a large onsite storage room. When they suddenly lost access to this space, they were faced with two choices—and they had to choose fast: move these records to expensive, inconvenient off-site storage or scan their documents. After speaking with Digiscribe, the choice was clear.

Digiscribe immediately arranged for the hundreds of boxes to be sent to their document scanning facility, prepped and scanned over 1 million pages of medical files . Each page was converted to a PDF, three fields were indexed and all document images were reviewed to ensure the highest image quality and legibility—critical for patient care.

"This project benefited our client out in three ways," recalled Mitch Taube, Digiscribe President. "First, we helped a client out of a jam by scanning a huge volume of documents in short order. Second, by eliminating the need for on-site storage, we saved the client over $180,000 in annual real estate costs. Third, now that these patient records are available electronically each physician has complete patient information available at their fingertips." Taube goes on to add, "Whether it's expensive onsite or offsite storage, along with the inconvenience of searching through boxes for critical patient information, or maintaining a well-organized chart room, healthcare facilities of all types and sizes can benefit in the same way from our medical records scanning services as this cardiologist group."

About Digiscribe
Digiscribe implements cost-effective document scanning and document management services that help medical offices, businesses of all sizes and non-profit organizations operate more efficiently, reduce costs and go green. Digiscribe's services include; medical record scanning, e-forms, online document management services, outsourced mailroom services, workflow automation, document scanning, full-text OCR, e-mail management, business process outsourcing, document imaging software and box & media storage.
