FOR IMMEDIATE RELEASE

Indusface crosses 500 customers milestone

Continues momentum of enterprise web application security leadership through rapid adoption of IndusGuard, Indusface's flagship product amongst leading organizations worldwide

29 August, 2012 Bangalore: Indusface, a leading information security organization, today announced that its worldwide customer portfolio has crossed 500 customers across multiple regions, which includes members of Fortune's 500. This significant expansion is a result of the rapid adoption of Indusface's unique flagship application security product IndusGuard by global enterprises, which has performed thousands of hybrid (i.e. daily automated and manual) web application scans till date.

Enterprises require a combination of daily automated scanning for technical vulnerabilities and manual scanning for logical vulnerabilities to ensure total protection for all their applications online. According to Gartner, "Automation is not always effective without manual configuration or testing activity; manual testing can uncover flaws that are difficult or impossible to find with automated tools." IndusGuard has successfully helped global enterprises in achieving total website security by providing a hybrid combination of daily automated and manual application scanning in one single comprehensive solution.

IndusGuard's hybrid approach to web application penetration testing provides rich in-depth automated scanning technology with human intelligence which helps address the most challenging web security issues on a daily basis. This product has a unique centralized vulnerability management facility which gives us a single view of our security posture, thereby enabling us to effectively manage vulnerabilities using a single management dashboard" says Vishal Salvi, CISO & VP, HDFC Bank

"IndusGuard is a comprehensive solution for web application scanning as it comes fully loaded with intelligent automated scanning engineering that is a highly scalable global platform on which companies can bank their application security upon, gaining 365 days of continuous protection. Its hybrid security methodology provides superior vulnerability detection along with high quality expert remediation, thus

helping to effectively secure and safeguard our applications online." says Jayantha Prabhu, CTO, Essar Group.

"We provide enterprise level application security through the cloud, empowering customers with continuous security for applications worldwide. With IndusGuard, it is our mission to provide customers with best in class application security which provides deep security coverage using next generation scanning technology on a daily basis, giving a comprehensive updated view of security and compliance postures at all time. We thank our customers for their incessant support and valuable feedback which has helped us in our continuous innovation to deliver a leading solution in application security globally." said Ashish Tandon, Chairman and CEO, Indusface

IndusGuard is a comprehensive cloud based dynamic application security testing solution from Indusface. It provides a unique hybrid approach to web application scanning by giving enterprises vital security intelligence using a potent combination of automated and manual testing for vulnerabilities. IndusGuard's broad and deep security checks includes daily scanning for system and application vulnerabilities, malware monitoring and detection, defacement and blacklisting detection, anti malvertising, business logic testing, revalidation using human intelligence, zero false positives, proof of exploitations support, adherence to globally accepted best practices and standards from OWASP, OSSTMM, SANS and WASC.

ABOUT INDUSFACE

Indusface is a privately-held, award winning, innovative, visionary, fast growing security company, trusted by fortune 500 organizations across the globe. Indusface helps safeguard websites, web and mobile applications using its flagship product IndusGuard, giving customers the distinctive edge of having total website and mobile application security.

The application level which is extremely susceptible

to attacks is frequently exploited by hackers who exploit system, application and business logic vulnerabilities to compromise websites, exposing them to online threats and at times implanting malware. IndusGuard by Indusface helps organizations secure their website, web and mobile applications with its zero touch, non intrusive, cloud based architecture and next generation technology giving customers the unique advantage of total website security. IndusGuard does daily, automated, comprehensive, accurate scanning of websites for systems and application vulnerabilities, and malware and helps organizations remediate these defects.

With IndusGuard, Indusface helps organizations to improve and strengthen their security posture thereby achieving strategic information security objectives. Indusface's powerful solution for total website and mobile application security helps organizations to focus more on business continuity, enable brand protection, strengthen customer relationships, increase productivity and profits. IndusGuard empowers security teams to keep web threats at bay, manage risk, and maintain compliance and regulations.
