

You've never
heard music
or intercom
like this
before on a
motorcycle
or ATV!

Take a MotoChello MC-100 Professional Motorcycle Audio and Communication system on your next motorcycle or ATV adventure and you'll hear music the way you like to hear it, in true high fidelity sound!

Professional Design

The MotoChello MC-100 was designed by a multi-patented engineer with an extensive background in theater and home audio systems and knowledge of cycle touring and its nuances (he is a rider, himself).

Frustrated by available systems, he decided to put his expertise to work and develop the system he wanted for himself. The result is clearly different. The unit design, installation and controls are well thought out and offer riders premium features that make travel more enjoyable.

Superior sound

MotoChello chose to go wired, rather than wireless, to produce the best quality music and uninterrupted communications. They also wanted to avoid the potential safety issues of batteries and RF signals next to the rider's head. Once you hear true, high fidelity sound from the MC-100 system, we know you'll agree.

The MC-100's firmware excels at filtering distracting noises while giving you the best of what you want to hear. The communication and music channels are separate and clear in all conditions, a difference you will notice immediately.

Communications Made Simple

With simple and consistent operation, the MotoChello MC-100 is easily controlled by a touch screen display that has been calibrated for gloved hands, or with an illuminated button panel to the left of the screen that is clearly marked to be easily accessed for the most common functions you will use while traveling.

You can quickly change music volume, turn headsets on or off, and mute one or both microphones, if desired, and turn them back on at any time. If your passenger likes a different volume than you, just adjust the fade balance (front to back volume) to suit you both. You can calibrate the volume of your connected music devices, so changing volume will be consistent when you change music sources.

As a bonus, the MC-100 also monitors your bike's charging system so you won't be caught unaware, making one less accessory to buy.

Packed with features for rich, beautiful music and the clearest motorcycle intercom possible, the MotoChello MC-100 may become your new favorite motorcycle accessory!

MotoChello^{INC}

MC-100 Features

- ◆ Simple touch screen or button panel operation
- ◆ True high-fidelity sound for great quality music
- ◆ Integrates your audio devices in one system (MP3, CD player, XM Radio, GPS, Radar detector, etc.)
- ◆ Includes audio cables to connect three devices simultaneously
- ◆ FM/Weather Band radio with preset and search functions
- ◆ Easily change music sources “on the fly”
- ◆ If using a Garmin® GPS with Bluetooth®, cell phone can be used through system
- ◆ Ability to standardize volume output of your audio devices so they will change equally when you adjust the master volume level
- ◆ Equalizer functions adjusts bass and treble
- ◆ Loudness function boosts sound quality when playing music at lower volume levels
- ◆ Simulated 3D Sound functions with a choice of levels for dynamic music
- ◆ Balance adjustments for left/right headset speakers
- ◆ Fader to adjust different volume levels for Rider and Passenger
- ◆ One button Mute/Unmute capability for headsets
- ◆ Superior sound filtering firmware to greatly reduce wind and other distracting noises
- ◆ Full duplex system - only the microphone of the person speaking is activated (no “cutting out”)
- ◆ Rider and passenger can have normal conversations - both can speak at the same time at normal voice levels
- ◆ Adjustable sensitivity of microphones
- ◆ Music lowers as much, or as little as you specify when speaking
- ◆ Specify the amount of time before music volume returns after you’ve finished speaking from 1 to 6 seconds
- ◆ Mute/Unmute capability for one or both microphones
- ◆ Dedicated port for an FRS radio
- ◆ FRS connection cables included for Midland®, Cobra® and Motorola® radios
- ◆ Unique communication handling so other riders hear your voice, but not your music
- ◆ PTT (talk) button on button panel with additional PTT button to install anywhere for rider or passenger use
- ◆ Volume adjustment for incoming communications can be different from music levels
- ◆ Bonus battery charging system performance monitor
- ◆ Touch screen calibrated for gloved hands and can be re-calibrated, if needed
- ◆ Choice of display color schemes
- ◆ Adjustable screen brightness for changing light conditions
- ◆ Select screen icons for your connected devices
- ◆ Wired system avoids battery and RF concerns and provides incredible music and uninterrupted communication
- ◆ Can be connected to accessory power for convenience or operated manually
- ◆ Additional headsets, microphones and PTT buttons available

System Includes

- ◆ Audio controller box
- ◆ Display unit with button panel
- ◆ 2 sets of premium helmet headsets
- ◆ 2 voice activated microphones
- ◆ Additional PTT button for external use
- ◆ 3 audio cables to connect devices
- ◆ 3 FRS cables for (Cobra, Midland and Motorola)
- ◆ Mount for display unit
- ◆ All necessary cables for installation and operation
