MVP Systems Software Brings Reliable Automation to

Matter Management and Legal Billing Leader, TyMetrix

TyMetrix leverages JAMS Job Scheduler from MVP Systems Software to bring real-time legal billing and matter management analytics to its customers.

5 September 2012 – MVP Systems Software, Inc., a leading provider of enterprise job scheduling and workload automation software, announced today that TyMetrix has selected JAMS Job Scheduler to automate and monitor IT processes that underpin its matter management and legal billing solutions. Connecticut-based TyMetrix serves more than 50,000 legal professionals globally and supports them 24x7.

After reviewing several alternatives, TyMetrix chose JAMS Job Scheduler for its tight integration with the Microsoft platform, including .NET and SQL Server. JAMS provided access to the entirety of its job automation database, an important feature that allowed the company's developers and DBAs to align job scheduling and workload automation processes with its in-house development and reporting. JAMS also delivered robust filtering capabilities necessary for viewing the details and the status of each job, even at times when thousands of jobs are running concurrently.

Working with MVP Systems Software and JAMS Job Scheduler, TyMetrix can quickly and accurately identify and address issues related to overnight batch jobs. DBA Manager Chris Benvenuto states, "We are saving time on troubleshooting - figuring out quickly what failed. Our IT team can provide a very quick response. In most cases, issues are resolved before people even wake up." Through predictive analytics tools available in JAMS, TyMetrix is also providing business users with accurate estimates of how long new jobs will take to execute.

"Powerful automation and job scheduling should be available in the context of any business's core IT functions. Years ago, we rebuilt JAMS Job Scheduler in .NET so that customers could take full advantage of our features regardless of the platform or application they needed to automate," says VP of Marketing David Kluskiewicz. "The flexibility we built into JAMS empowers users with the ability to integrate automation right inside their mission-critical applications."
