Advantages of Dental Implants

Henslee Dental Team aims to provide you with the very best dentistry care available, that is suited to your individual needs.

Our [Universal City TX dentistry](#) team can help you replace missing or severely damaged teeth with removable dentures, but if you're looking for a more permanent solution that gives you the performance and aesthetics of natural teeth, you'll want to learn more about dental implants.

So what are some of the advantages of [dental implants](#)?

Designed and Constructed to Last

Our **dental implants** are designed to last much longer than dentures—sometimes even a lifetime!

How does our Universal City TX dentistry team do it? [Removable dentures](#) have to be replaced every few years because they are designed to cover up the space where your teeth once were.

Implants on the other hand, are designed to mimic the natural formation of your teeth by bonding a root replacement to your jawbone and covering that with a [dental crown](#). This leaves a much more secure and permanent replacement that can withstand years of use!

Easy to Clean and Maintain

Because implants are designed to be a permanent solution to missing teeth, you can treat them just like you would to your natural ones.

Purchasing denture [dental hygiene](#) products such as cleaners or adhesives (which are quite expensive) are unnecessary. Simply purchase floss, a toothbrush, and toothpaste, and you're all set!

Healthy Smile

Many patients don't realize that when you are missing one or more teeth, the remaining ones tend to shift or weaken due to the increased stress caused by picking up the slack from missing teeth during eating and talking. In addition, your jaw bone will start to deteriorate and alter your overall facial appearance.

Our [Universal City TX dentistry team](#) often suggests dental implants because they mimic both the form and function of a fully organic smile, giving you a stronger bite and a better overall look than with dentures.

Eat what you want

Unlike dentures, which can slip and slide even with adhesive, implants are stable 24/7. This means that they allow you to enjoy a wide variety of foods that you would not be able to attempt to eat with dentures. There are no limitations!

You will be able to chew your food normally, improving both the taste of the food and your ability to maintain a healthy, nutritious diet with a larger variety of foods.

Talk Normally, Look and feel Confident

Your Universal City TX dentistry team often suggests implants over dentures because they allow for more natural sounding speech—there is none of the slurring and mumbling that comes with worrying about slipping and sliding of the denture appliance.

When you lose a single tooth, your jawbone shrinks because there is no root to hold it in place. Losing multiple teeth in one area can shrink the jawbone substantially, leaving your face looking much older.

With implants, you don't have to hide your smile for fear that it looks unnatural, or out of place. Dental implants are well-anchored and designed to be indistinguishable from your natural teeth, making them the replacement teeth that give you your smile—and your confidence—back.

So what are you waiting for? If you're ready to restore your overall appearance with your Universal City TX dentistry team and dental implants, [schedule an appointment](#) online or call us at: **(210) 658-3131**.
