## Video-charge Voice Communication and Collaboration For Your Office and Mobile Workers...For Free!

Since the invention of the telephone, we have grown accustomed to conversing without seeing the other party. But it's not natural. So much of our communication is visual, not just verbal. That's why video is so powerful. We call it visual communication, and we believe it will change the face of communications more than any other medium. Most people intuitively know this, but video communication has been impractical and expensive...until now. SimpleSignal now offers video communication FREE as a part of your unified communications solution!

People now work in a network, not a place. Visual communication emulates the face to face meetings and water cooler conversations that happened naturally when we all worked in the same location, enabling a new level of spontaneous collaboration.

SimpleSignal is now leveraging the power of video and bringing it to a video deskphone, computer, tablet, iOS or Android smart phone near you. SimpleSignal's video solution is cloud-based, enterprise-grade, secure, and a seamlessly integrated, quality component of your company's communication strategy.

At SimpleSignal we believe video is the new voice. Once you've experienced it, you will never go back!

# Video Communication Anywhere... Any Device

simpleSignal™

## Why Enterprise-Grade HD Video Communications?

Skype is a great solution for the individual user. However, it's really just a standalone consumer service. SimpleSignal video is cloud-enabled and seamlessly integrated into your company's PBX, enabling calling features like 4-digit dialing, remaining in hunt groups, and much more:

- Connect with your colleagues and conference rooms anywhere in the world with a simple touch.
- Universal bridging capabilities to on-premises and cloud-based users
- Premier quality on the device of your choice, even over less than optimal wireless networks
- Included FREE with your SimpleSignal service!

## Spontaneous Video Communications

Let's say you're on a regular voice call and you say, "Let me show you what I'm looking at." Switching to visual communication is as easy as opening the app...nothing to download, no wait time, no bridge to set up. And no wi-fi necessary!

## Multi-Point Video Conferencing Affordable Video Conferencing Available Now!

SimpleSignal's Multi-Point Video Conferencing Service is a cost-effective, hosted solution. Secure co-location facilities and network management are maintained so your enterprise doesn't have to. We enable ad hoc inter-enterprise video conferencing in a secure environment, maintaining video conferencing behind your firewall. Now you can easily and securely allow remote salespeople, customers, executives or partners to join your video conferences.

## Video Voicemail

Revolutionize how you leave voicemail messages for co-workers, clients and friends. Visual communication may be more important in voicemail than live conversations. Communicating your message through facial expression conveys your points in a way no traditional voicemail can do.

## Bring Your Own Device

- H.323 and SIP Compatible
- Video apps for iPhone, iPad, and Android devices
- PC and Mac Compatible
- Compatible with Microsoft, Lifesize, Cisco, and Polycom telepresence equipment

## Network Agnostic

Freely roam and connect over WiFi and mobile networks. In fact, it is now possible for an enterprise to be connected entirely without desk phones. By using our cloud based technology, SimpleSignal allows for mobile devices to become the end points for voice and video communication.
