

Webconferencing-Test Releases Industry's First Review of Top Free Web and Video Conference Solutions

Top Free Webconference Platforms Helps Businesses and Users Identify Best Productivity and Online Meeting Tools For Their Needs

TeamViewer, WebEx Meetings Basic and Google+ Hangout Rank As the Top Three Free Web and Video Conference Solutions

Fairport, NY and Frankfurt am Main, Germany, September 13, 2012 – Webconferencing-Test.com today announced a review of the Top Free Web and Video Conference Solutions. The industry's first vendor-neutral ranking is comprised of a comprehensive review and scoring of vendors' free offerings that can be used by both individuals and businesses is available at webconferencing-test.com/free. The criterion that is rated includes: features, functionality, usability, meeting setup, cost transparency, security, system requirements and platform support. The reviews feature screen shots and links to try each of the free services.

"Historically free webconference and video conferencing solutions didn't work for professional use because of both license restrictions and functionality. As solutions become more prevalent and built into software and social networking platforms there have been viable free services that meet small businesses requirements and those of end-users. There are millions of people that can benefit from identifying the right free web and video conference solution for their needs to help their online collaborations, business productivity, efficiency, manage dispersed work groups, and reduce overall costs," said Robert Harnischmacher, the managing director at Publicare Marketing Communications and publisher of Webconferencing-Test.com.

The review exclusively focused on vendors' free offerings. Solutions evaluated are AnyMeeting, BuddyMeeting, Google+ Hangout, join.me, MeetingBurner, SalesCrunch, Skype, Spreed Meeting, TeamViewer, Vyew, and WebEx Meetings Basic. Each of these free services has their own set of tradeoffs that is best suited for different needs. These include different combinations and variances in:

- Requirements for each participant to have an account
- Restrictions on the types of audio between VoIP, toll numbers or international local numbers
- Limitations on the number of participants
- Constraints for advanced scheduling or on-demand meetings
- Downloads and installation of software versus web-based meeting software
- Operating system, tablet and mobile device support

Comprehensive vendor-independent reviews and rankings of more than 30 web conferencing paid and full-subscription solutions are also available for those interested in evaluating and comparing complete versions at Webconferencing-Test.com. The site provides services for individuals and companies that are in the process of evaluating online meeting and web conferencing solutions. The company offers a [Free Evaluation Guide](#) that explains which criteria are important when selecting web conferencing software. [Compare Tools Free](#) is a complimentary service that is designed to deliver an initial overview of the strengths and weaknesses of various solutions.

[Compare Tools Pro](#) empowers users to create customized, detailed reports of four or more products from more than 30 web conferencing solutions. These reports include comprehensive and objective analysis on the basis of over 80 functions and criteria with a feature matrix of each tool. The key categories of reviewing webconferencing solutions span: functionality, usability, meeting setup, software installation, costs, security and system requirements. Starting at \$19 for a comparison of four products, additional products can be added to each report for \$4 each. The service is an excellent basis for evaluating webconferencing and online meeting tools software.
