

# Wombat's Security Training Platform

Our training modules are software-based, very interactive, and capture data as users practice critical concepts.

## Assessment

- Mock Phishing Attacks
- Mock USB Attacks

## Reporting

- Assignment Status
- Most Missed Concepts
- Module Performance
- Report Cards

## Training

- Compliance Training - NEW
- Safer Web Browsing - NEW
- Security Beyond the Office
- Smartphone Security
- Safe Social Networks
- Phishing Traps
- Social Engineering
- Mobility and Travel
- Malicious URL Training
- Password Security
- Email Security

After one 10 minute training session user susceptibility to attack can be reduced by 50%.

## Why Choose Wombat?

- Security Training Platform makes it easy to create, monitor and report on the effectiveness of your security awareness program
- Integrated mock attacks and interactive training engage, challenge, and assess employees
- Learning science principles ensure users “learn by doing” and retain content much longer
- Our training approach was developed by educators with cyber security expertise
- It's cost-effective and likely to cost less than your current training

# SECURITY TRAINING PLATFORM

## One of a Kind **INTEGRATED** Assessments and Training

Wombat's Security Training Platform is the only cyber security learning system on the market today specifically built for security officers. It provides an integrated approach to assessing employees and providing in-depth training to strengthen a company's security posture.

Security officers can send a mock phishing attack to a group of employees and then easily assign additional training to people who fell for the attacks. This creates a continuous learning environment where employees are being assessed and trained throughout the year which lengthens learning retention and changes behavior.

# Innovative Cyber Security Assessment and Awareness Training System

A one of a kind platform our Security Training Platform is specifically built to provide Security and Information Officers with the powerful tools they need to train employees how to recognize and avoid cyber-attack. Wombat's platform integrates software-based interactive training, mock cyber-attacks, reporting, and administrative capabilities into one easy to use system.

## Automate your Security Awareness Program

With Wombat's Security Training Platform you can easily manage your security awareness training and employee assessment program from one cloud-based Enterprise-wide system.

- Deploy mock cyber-attacks which create teachable moments and helps employees become receptive to more in-depth training
- Create training assignments for everyone at once, or for groups of employees you define
- Select from a comprehensive set of training modules that teach practical advice to avoid numerous threats
- Monitor employee completion of assignments and deliver automatic reminders about training deadlines
- Identify the groups who have the best or worst understanding of critical risk areas
- Show measurable knowledge improvement over time with easy-to-read reports for executive management
- Train employees globally with the Platform and training modules available in many languages

## Wombat's Progressive Approach to Training

Instead of classroom, video, or slide-based training, choose a proven training approach that improves cyber security knowledge and changes behavior. Users can't sit idly by or "check out" during this training. The interactive software lessons are developed using Learning Science Principles to engage the user, enabling them to learn and retain the information longer than traditional training methods.

# Training You Can Measure

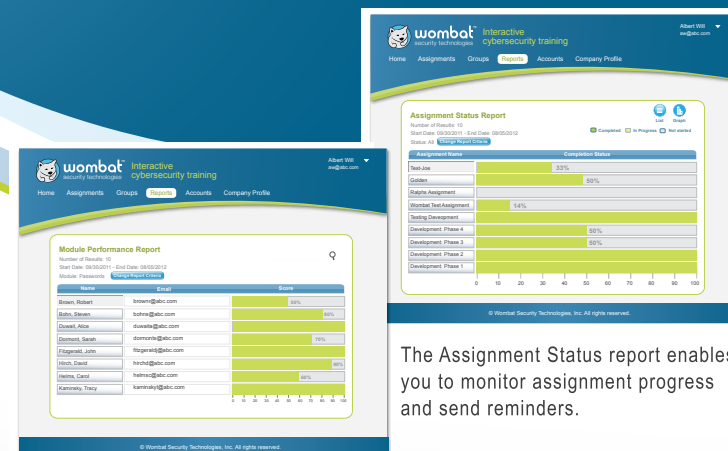

The Security Training Platform captures each employee's interaction with mock attacks and training modules. This means that you instantly have detailed information not only about who completed which assignments, but also in which concepts they are strong or weak, and how they have improved over time.

## Comprehensive reporting capabilities

All user data can be characterized, filtered and reported using 8 administrator-defined fields such as job function, geographical location, department, hire date, etc.

- Assignment Status Report – Shows assignments in progress, complete or untouched
- Most Missed Report – Displays the areas of greatest weakness by module, user, assignment, group and date
- Module Performance Report – Shows scores for each group or user by training module
- Report Cards – Shows a user's overall performance including number of correct answers versus number of questions asked per module

See and share your progress in securing your company

The Module Performance Report shows employee scores as a percentage for a particular training module. From this report, security officers could prevent anyone with a low score from connecting their smartphone to the corporate network until they improve their score.

The Assignment Status report enables you to monitor assignment progress and send reminders.
