- PRESERVES FILE TIMESTAMPS
- MINIMAL FOOTPRINT
- JOB TEMPLATES
- ENCRYPTED VOLUME COMPATIBLE
- SAME TRUSTED PLATFORM

## REALLY FAST COPIES

### Forensically Sound File Collection

Incomplete and undocumented electronic discovery collections occur every day. The result of mishandling these files can be costly, to both the client and their legal counsel. Proper file collection methods should be discussed at the beginning of each case.

When collecting files for electronic discovery, you should use processes and applications that preserve and verify collected electronic files with minimal impact on client systems. Without these, creating defensible and verifiable electronic discovery productions and evidence authentication is difficult, if not impossible.

SafeCopy 3 is offered in several different formats tailored to fit your needs and the needs of your project. Now you can quickly and easily obtain defensible forensically sound active file collections.

### SAFECOPY 3 FEATURES

- ▶ Select from multiple data sources (file shares, individual files or file lists)
- ▶ Supports paths greater than 255 characters (up to 32,000)
- ▶ Resumes automatically after network outages
- ▶ Multithreaded
- ▶ 100% file copy verification (using MD5 hash comparison)
- ▶ Preservation of file system timestamps and metadata
- ▶ Filter by file extension (inclusion, exclusion and use file extension) and date range

### SafeCopy 3 Desktop

- Installed on the local computer
- Licensed to a single system
- Capable of accessing all local and networked devices

### SafeCopy 3 Server
