

DETECT MONITORING SERVICE

Proactive protection against phishing attacks

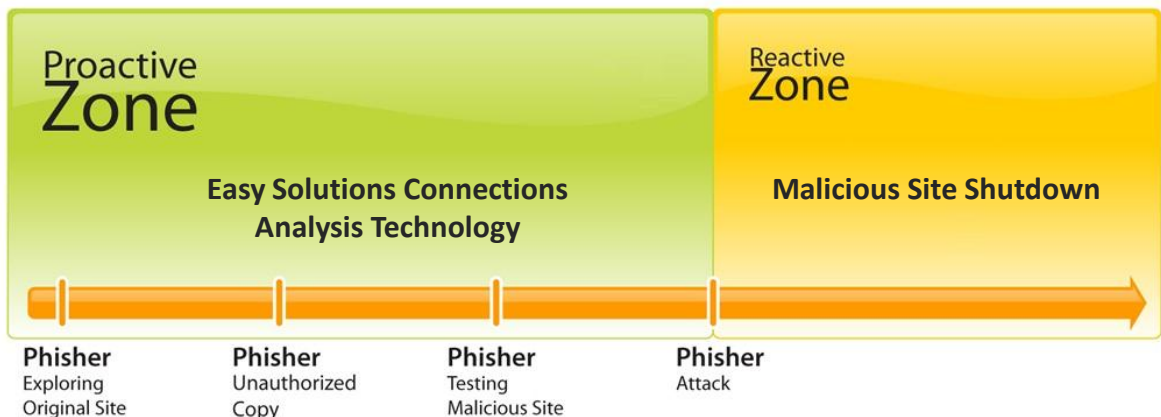

Highlights:

- Detects and deactivates phishing attacks targeting your business
- “Flash Active Monitoring Script” for invisible monitoring of protected sites
- Powerful proprietary methodology for connections analysis allows early notification of malicious activity
- Over 800,000 unique phishing attacks found in the last 12 months with 76% proactive detection
- Proven track record in disabling fraudulent websites with an average shutdown time of 3.6 hours
- Customer Portal enables easy reporting of new cases and fast access to comprehensive reports

Detect Monitoring Service (DMS) provides proactive protection against phishing attacks with early detection and comprehensive take-down services, all from an innovative cloud-based portal.

DMS effectively handles the lifecycle of any phishing attacks by integrating 7x24 real time monitoring and connections analysis with in-place incident response systems.

DMS Customer Portal allows the reporting of new incidents to be investigated and provides access to detailed case history and comprehensive reports.

DMS FEATURES

Early Notification

DMS utilizes a powerful proprietary methodology for connections analysis, that identifies specific patterns and behaviors that occur at the early stages of a phishing attack. DMS can thus stop an attack even before it becomes an active threat.

Real-Time Monitoring

Our “Active Monitoring Script” enables real-time monitoring and connection analysis of the protected sites.

Fast Phishing Site Shutdown

Fraudulent sites should be detected and shutdown immediately to limit losses, reduce investigation time and preserve brand reputation. DMS shuts down thousands of phishing sites a year in an average of 3.6 hours.

Referrer Malicious Alert

This innovative feature enhances the early and accurate detection of malicious web sites by comparing the content of the protected sites with the suspicious pages, using an heuristic algorithm.

Malware Monitoring

Easy Solutions monitors hundreds of samples of new financially motivated malware on a daily basis which enables us to proactively and quickly implement an action plan when a malicious code is attacking your clients.

FFIEC Compliance

The FFIEC requires the use of solutions that report suspicious and anomalous activity. DMS proactively detects and shuts down malicious activity occurring in the online banking environment.

Additional Pharming, MITM and MITB Protection when Combined with DSB

DMS works in conjunction with Detect Safe Browsing (DSB) to provide an increased level of protection and proactive detection of fraudulent web sites, all managed from the same interface. DSB provides real-time protection against browser resident malware and more advanced phishing and pharming attacks.

DMS CUSTOMER PORTAL

The DMS Customer Portal helps financial institutions stay aware of online attacks affecting them. The DMS Customer Portal is automatically populated with incidents that are detected proactively. DMS users can also report new incidents to be immediately investigated and deactivated. The DMS Customer Portal features a rich selection of reporting features as well.

Real Time Monitoring Visualization

This dynamic graph shows all connections to the client's protected sites, which are analyzed in real-time, and the alerts created when suspicious activity is found.

Live Heat Map

The Heat Map allows the visualization of the host countries of phishing and malware attacks against your protected sites.

User Rights Assignment

This improved interface allows controlling the access to different sections of the portal.

The screenshot shows a 'User Rights Assignment' dialog box. The background shows a table with columns 'Id', 'Account', 'Job Title', 'Name', and 'Phone'. The dialog box is titled 'Edit Assignments' and contains the following information:

- Assignments for Account: test account
- Available Roles:
 - Add new Ticket
 - view dsb black list
 - view dsb phishing cases
 - view dsb pharming cases
 - view dsb malware cases
- Roles Assigned:
 - view dsb support events

At the bottom of the dialog box, there are 'Apply' and 'Cancel' buttons.
